Their bells and flowerets of a thousand hues." — Milton.

BARR & SON.

ORDER DEPARTMENT:

34, KING STREET, COVENT GARDEN, LONDON, W.C.

SPECIAL NOTICES.

I. **Quality.**—When the Dutch Bulbs were in flower we visited, professionally, the principal farms of Holland to inspect the crops, and have drawn our supply of roots from the healthiest "stocks" of the most reliable Dutch growers; and it is with the utmost confidence we recommend the bulbs, &c., offered, feeling sure they will give satisfaction. The mildness of the past winter was very favourable to the growth of almost all bulbous plants, and, consequently, the roots are fine; except that in the case of the Hyacinth, unfavourable circumstances at the time of flowering and afterwards, somewhat interfered with the general development, and, consequently, in some instances the roots are not quite of average size this autumn, and some few of the varieties may not give as fine flower spikes as were produced from the bulbs of the previous season, especially if forced; but if treated as recommended on p. 6, so that the flower is gradually and naturally developed, we believe the result will be a good average flower spike.

II. In conjunction with our Experimental Grounds, where we have a representative collection of Hardy Bulbous and Tuberous Rooted Plants, arrangements have been made at Leiden, Holland, for an extensive propagation of Daffodils, Iris, Peonies, Christmas and Lenten Roses, Hardy Cyclamen, &c., to meet the rapidly growing demand for these speciality collections, to which our Mr. Barr has given so much attention. The culture will be under the direction of one of Mr. Barr's sons, who is having a special training in the **Famed Bulb Garden** of the Messrs. de Graaff Brothers, Leiden.

III. We are the fortunate possessors of the unique collection of Daffodils cultivated by the late lamented eminent horticulturist, the Rev. John Nelson, of Aldborough Rectory. A descriptive list will be found on page 10. For many years the Rev. John Nelson and our Mr. Barr were indefatigable in their exertions to popularize this family of beautiful hardy Spring Flowers, and it was pleasure unalloyed to Mr. Nelson to see one of his favourites so much in favour, that ladies of fashion adorned their dresses with wreaths of Daffodils, filling their flower-vases and decorating their rooms with Daffodils; and Royalty had bouquets composed of Daffodils. The Aldborough Daffodils possess special importance, as Mr. Nelson carefully selected from the modern varieties the finest types, discarding those he considered as having too close a resemblance to each other. Some of the Daffodils cultivated at Aldborough were known to Gerard, Parkinson, Herbert, Salisbury, and Haworth, but the majority of them are quite modern, and these are indicated by an*. All the Aldborough Daffodils are perfectly hardy, having remained uninjured in the open ground during the recent series of severe protracted winters. Out of doors the different varieties flower in succession, from February to end of May; but, cultivated under glass, three in a pot, as is now commonly done, a succession of the various forms can be had from January, as all Daffodils grown under glass, and cultivated in the same way as the Hyacinth, flower several weeks earlier than those grown in the open ground. Arrangements have been made for a series of Exhibitions of Cut Daffodils in connection with the various Spring Flower Shows of the Royal Horticultural Society, South Kensington, 1883.

IV. **Carriage** may be deducted at settlement of accounts on orders of 2*s.* and upwards, to any Railway Station in the United Kingdom, and to all ports on the Irish Coast.

V. **Orders paid in advance** can either be sent carriage paid, or a liberal equivalent in goods will be added. *This latter course will be adopted unless we are otherwise instructed.*

VI. **Packages.**—A small charge is made for these, and if returned within a fortnight, allowance will be made for the same. In returning empties, the sender's name should invariably appear on the label for identification, and the date of dispatch and the name of the Railway Company notified by post.

VII. **Fruit and Forest Trees**, Shrubs, Plants in Pots, Soils, Watson's Lawn Sand, Barr's Cut Flower and Fruit Conveyance Boxes, Barr's Improved Indoor Frames, Barr's Improved Hydropult Garden Engines—on these we do not allow carriage.

VIII. **Five per cent.** may be deducted from accounts if paid within one month from date of invoice.

IX. **Post Office Orders** to be made payable at Post Office, Covent Garden, W.C. All cheques to be crossed, adding the words "and Co." Small amounts may be paid in Postage Stamps, or coin may be sent in a registered letter.

FOREIGN AND COLONIAL ORDERS.

X. To insure attention, *Foreign and Colonial orders should be accompanied by a remittance, a draft, or an "order to pay," on a London agent.* The remittance being sufficient to cover expense of cases, and also of carriage when the freight is required to be paid in advance.

XI. Seeds and bulbs can now be despatched in cases to India, at the rate of 1*s.* per lb., through the Indian Parcels Post, and seeds may also be sent by the ordinary mail, in packets of 8 oz. for 6*d.*

XII. In shipping plants to India, great care is exercised by us in selecting, preparing, and properly packing the same. Still, there are so many contingencies, that we cannot, in any way, hold ourselves responsible for the condition in which plants or bulbs reach their destination.

XIII. Our experience in successfully preparing and shipping seeds and plants to India extends over a period bordering on thirty years.

FOR CONTENTS, see page 32.

FOR CONTENTS, see page 32.

A FEW SPECIALITIES

Barr's beautiful Dutch Mixture of Hyacinths.	This splendid mixture of Hyacinths was specially arranged for by Mr. Barr on the occasion of his visit to one of the large Dutch Bulb Farms. The colours are evenly blended, to produce a fine effect in flower beds, &c., and include scarlet, purple, lavender, porcelain, azure-blue, mauve, white, rose, blush, yellow, &c.....per 100, 25s. ; per doz. 4 6
The Aldborough Daffodils on page 10.	
Hyacinthus candidans (<i>the Snow-white Summer-flowering Giant Hyacinth</i>), it would be difficult to over-estimate the value of this noble hardy plant, the flower stem attains a height of 3 to 4 and even 5 feet, and during July and August is surmounted by a grand spike of numerous pendant bell-shaped, snow-white flowers. It is a splendid conservatory plant, and by potting the bulbs in succession to June it will flower under glass till November. When grown in pots, plunge in ashes, as recommended for the Hyacinths, page 6. If for out-door decoration, plant 6 to 9 inches deep, and it will remain uninjured by the severest winter. Figured in <i>The Garden</i> , 1881. Roots ready end of October, per doz., 3s. 6d., 5s. 6d., & 7s. 6d.; each, 4d., 6d. & 9	
Colchicum speciosum rubrum. The largest, richest coloured and most beautiful of this family, flowering in profusion during the latter part of September and early in October; valuable for clumps and masses in borders or on rockwork. Figured in <i>The Garden</i> , 1877.....per dozen 18 0	
Colchicum autumnale, double, pure white, very rare, and exceedingly handsomeeach 3 6	
Spiraea Japonica fol. Aureo-reticulatis (<i>the variegated-leaved Spiraea</i>). The beautiful pure white, feathery flowers of this unique plant, surmounted on red tinted glossy stems, surrounded by an ample foliage of dark green leaflets, which are conspicuously traced throughout with golden-yellow veins; these very remarkable combinations have conspired to render it the most strikingly decorative amongst forced flowers, and one of the handsomest plants for the conservatory and sitting-room; cultural treatment same as recommended for forcing Lily of the Valley, page 17. This plant is perfectly hardy, and whenever seen in herbaceous borders attracts attention and elicits admiration; prepared clumps for forcing.....per doz. 15 0	
Chionodoxa Luciliae (<i>the Glory of the Snow</i>). For pot culture, 3 to 6 in a pot. Mr. Maw, in describing the circumstances under which he found the Chionodoxa luciliae, says, "At the lower level it was out of flower, but near the summit of the mountain a mass was met with in full splendour, forming one of the most sumptuous displays of floral beauty I ever beheld; a mass of blue and white resembling Nemophila insignis in colour, but more intense and brilliant." The Chionodoxa luciliae was beautifully figured in <i>The Garden</i> , July 3rd, 1880, and in 1878 the Floral Committee of the Royal Horticultural Society awarded a First Class Certificate for this plant; home-grown rootsper doz., 5s. 6d. & 7 6	
Puschkinia libanotica , white, shaded blue, very early flowering, 3 ft.per doz. 10 6	
" compacta , white, shaded blue, very rare, 3 ft." 21 0	
" The Puschkinia is a first-class spring flowering bulb, taking rank with the Chionodoxa. <i>P. libanotica</i> flowers first, with very profuse loose spikes, and is closely succeeded by the deeper-coloured and more compact spikes of libanotica compacta.	
Leucojum vernum , white, 3 ft., Collected Rootsper 100, 10s. 6d. ; per doz. 1 6	
white, 3 ft., English roots 15s. ;" 2 6	
" Leucojum vernum (<i>Spring Snowflake</i>) is one of the earliest of beautiful Spring flowers; the blossoms resembling the Snowdrop, are snow-white, tipped green, exceptionally handsome in outline, and much prized for bouquets.	
Scilla sibirica. In early Spring the effect of the intense rich blue of Scilla sibirica is charming in beds, masses, or edgings, and under glass with early forced bulbs it is a most desirable plant, grown 3 to 6 roots in a potper 100, 6s. 6d. ; larger bulbs 8 6	
Scilla taurica , fine ultramarine blue, a giant form of <i>S. bifolia</i> , with flower spike twice the size. A most valuable plant out of doors, and charming for pot cultureper doz. 7 6	
Iris reticulata, Sweet-Scented, for Early Forcing , 3 to 6 bulbs in a pot. If potted early, the brilliant deep violet, golden blotched flowers of this beautiful Iris may be had under glass in January, and by successive pottings a continuous supply can be maintained till March.....selected roots, per doz. 7 6	
Iris Persica, Sweet-Scented, for Early Forcing , 3 in a pot. The beautiful pearly blue flowers, inlaid with purple and gold, of this charming Iris, may be had under glass in January and February, per doz. 4 6	
Anemone fulgens. This is the most brilliant and graceful of all Winter and Spring-flowering Anemones. The rich dazzling scarlet flowers, combined with a light elegant growth, render it the most attractive scarlet flower of Spring. It is valuable for table bouquets or vases, the cut flowers lasting a long time in water. If the roots are planted early, and the weather is favourable, flowers may be gathered from Christmas; and, by successive plantings, say from August to April, a continuous display of flowers can be maintained till Julyper 100, 21s. ; per doz. 3 6	
Anemone coronaria, Victoria Giant , a new race of single Poppy Anemones, remarkable for a vigorous growth, and unusually large saucer-shaped flowers, with great variety of shade and colour; to these fine qualities the raiser states, "The profusion and continuous blooming of the Victoria Giant Anemone far surpass that of the ordinary single <i>Anemone coronaria</i> "per 100, 12s. 6d. ; per doz. 2 0	
Helleborus orientalis punctatus (<i>the Purple-Flowered Spotted Eastern Lenten Rose</i>). This is one of the many very beautiful varieties of the Caucasian Helleborus, and we confidently recommend it for pot culture, flower borders, and to naturalize in wild gardens, orchards, or woods; we have a large stock, and offer fine plants at greatly reduced prices to encourage extensive planting.	
per 100, 63s.; per doz. 7s. 6d. & 10 6	
Hepatica (<i>Hepatica triloba</i>). These are all beautiful, whether grown in pots, in cool houses, or out of doors; the colours are such that no Pelargonium, Azalea, or Carnation can equal, and the profusion of bloom surpasses that of all other plants; strong clumps, double red or single blue...per doz. 21s. to 30 0	
Ixolirion tataricum. This splendid new plant will be found figured in <i>The Garden</i> , July, 1880. per doz. 15 0	
Lachenalias. Nelson's new varieties, see p. 37.	
Modiola geranioides (<i>Malvaceae geranioides</i>). A splendid hardy rock plant, and also suitable for hanging baskets; the foliage is elegant and profusely covered with intense magenta, large saucer-shaped flowers; see figure in <i>The Garden</i> , January, 1882 per doz. 10 6	
Lapageria alba , a magnificent white variety, producing in profusion bunches of flowers of great substance many months in succession; a very distinct and elegant greenhouse climber, which should have a place in every collection of plants.....each, 10s. 6d., 15s. 21s., 42s. & 63 0	
Lapageria rosea superba , a vigorous growing variety, producing in bunches a great profusion of large bell-shaped rosy crimson flowers, and blooming many months in succession ..each, 7s. 6d., 10s. 6d. to 21 0

Note.— Any customer having a preference for collections of bulbs offered by other London houses—whether advertised in catalogues, daily papers, or other periodicals—the same may be had from us at the prices and terms of the advertisers.

King Street, Covent Garden, 1882.]

[Collections of Bulbs.

 An Order Sheet accompanies the Catalogue to facilitate ordering, it being simply requisite to fill in the quantities. The Order Sheet is an Index to the Catalogue, and, when taken in conjunction, making out the order gives very little trouble.

N.B.—The Marginal Numbers in the Catalogue are changed annually.

HYACINTHS, IN SIX DISTINCT COLOURS, SPECIALLY SELECTED FOR OUT-DOOR CULTURE IN BEDS, RIBBONS, OR GROUPS.

When in Holland, Mr. Barr selected the 6 varieties of Hyacinths enumerated as being distinct in colour, of fine habit, and having large flower spikes. They will also be found valuable for filling rustic baskets, flower boxes, and vases.

POMPON OR MINIATURE HYACINTHS.

These Miniature Hyacinths produce neat spikes of bloom, and are grown in small glasses, fancy pots, old china bowls, crystal dishes, jardinettes, and other elegant contrivances; and are sometimes associated with the bright blue *Scilla sibirica*, *Crocus*, *Snowdrop*, *Early Tulips*, *Narcissus nanus*, the beautiful sweet scented *Iris reticulata*, and the violet-scented *Persian Iris*. When cultivated in china bowls, etc., these bulbs succeed best planted in "Barr & Son's Prepared Charcoal and Cocoa Fibre Mixture" (for which see p. 47), the surface should be covered with fresh green carpet moss (see p. 47).

In children's gardens and small flower beds, the Miniature Hyacinth, *Scilla sibirica* and *bifolia*, *Spring Snowflakes*, *Dwarf Narcissus nanus* and *Hoop Petticoat*, *Dog's Tooth Violets*, *Anemone fulgens*, *Duc Van Thol Tulips*, *Triteleias*, *Crocus*, *Iris reticulata*, *Grape Hyacinths*, *Hepaticas*, *Iris Persica*, *Jonquils*, *Sisyrinchium grandiflorum*, *Snowdrops*, *Chionodoxa luciliae* (*The Glory of the Snow*), and the Double *Saxifraga granulata*, all intermingled, make an exceedingly fine display, and give a succession of flowers throughout the Spring months.

DWARF WHITE ROMAN HYACINTH FOR EARLY FORCING (Selected Bulbs).

76 The Dwarf pure white Sweet-Scented Roman Hyacinth is now universally prized in bouquets. It flowers during October, November, and December. The bulbs are potted in succession, say 3 to 6 in a pot, during August, September, and October; when well rooted, they should be placed in a moderately moist, warm temperature, and forced gently, water being given freely. 25/- per 100; 3/6 per doz.; 4d. each.

DWARF PARISIAN OR BLUE ROMAN HYACINTH.

77 The Blue Roman Hyacinth flowers from a fortnight to three weeks later than the white variety. 12s. 6d. per 100; 2s. per dozen; 3d. each.

78 Sweet-Scented Paper White *Narcissus*, for Early Forcing. This beautiful pure white *Narcissus* is in flower with the Roman Hyacinth when cultivated in the same way. 12s. 6d. per 100; 2s. per doz.

79 Double Roman *Narcissus*, for Early Forcing. This *Narcissus* comes into flower with the Paper White, and as the individual blossoms are large they are separately mounted and used in small bouquets and button holes. 17s. 6d. per 100; 2s. 6d. per doz.

HYACINTHS.

FOR CULTURE IN GLASSES, JARDINETTES, POTS, AND FOR EXHIBITION.

 The * indicates the best varieties for early forcing in pots, and for growing in glasses, jardinettes, &c.

CULTURE.—Immediately after potting the Hyacinth, which may be done in succession, from September to December, place the pots out of doors on a bed of ashes, and cover with six inches of the same material, but if it can be commanded, a covering of cocoa fibre is preferable; in six to eight weeks the pots will be full of roots. If very early flowers are required, those potted in September may be forced gently in December, giving abundance of bedding, Pompon, and Roman Hyacinths, etc.]

(Barr and Son,

HYACINTHS FOR POTS OR GLASSES—continued.

of water; but if finely developed trusses and rich colours are preferred to very early flowers, the Hyacinth must not be forced, but when removed from the covering in January, should be placed on the shelf of a greenhouse, in a sitting-room window, or in a cold frame, close to the glass, always in the most genial and sunniest situation at command, and the plants allowed to develop their flowers gradually and naturally, water being given regularly and freely, as it is well known to professional cultivators that failures, for the most part with Hyacinths, arise from allowing the soil to become dry. Abundance of air is necessary, but a dry atmosphere and a draughty situation should be sedulously avoided, as these, and such like causes, shrivel up the flower buds. To secure a succession of Hyacinths, remove from under the ashes or fibre a proportion once a fortnight say from the middle of December to middle of February.

If the Hyacinth is grown in glasses, the base of the bulb should just touch the water, and a little charcoal be placed in the glass to keep the water sweet. It is, however, preferable to fill the glasses with prepared Charcoal and Cocoa Fibre (for which see p. 47). Place the glasses in a room without a fire, or, still better, in a greenhouse, and when the plant has made a little top growth place it in the sunniest situation at command till the flower spike is well developed; then remove the glasses where the flowers are to be enjoyed.

When cultivated in jardinetts, the Hyacinth may be associated with other early-flowering bulbs, such as *Scilla sibirica*, *Tulips*, *Snowdrops*, *Crocus*, *Narcissus*, *Iris reticulata*, &c. Barr & Son's prepared "Charcoal and Cocoa Fibre" should invariably be used (see p. 47); the preparation must always be kept moist and the surface covered with green carpet moss when the jardinet is in the sitting-room.

The † denotes varieties with double flowers. These, with the exception of those which have semi-double flowers, are unsuitable for growing in glasses and jardinetts, or for forcing. The finest of the double varieties are those quoted, and we recommend them to be grown in pots.

The "ex" indicates the sorts which produce the largest or most perfect flowers, and cultivators of the Hyacinth for exhibition should select from those only.

A visit to the Metropolitan and Provincial Hyacinth Exhibitions, shows the superiority of single over double Hyacinths, it being estimated that the proportion of single to double flowers staged is about fifty to one.

When an order is given for any of the under-mentioned "Selections," and it is stated they are for glasses, jardinetts, or exhibition, single kinds will be sent. If this is not specified, the selection will include a proportion of double varieties.

OUR OWN SELECTIONS.

The varieties of Hyacinths enumerated and described are those Mr. Barr personally selected during the many visits of inspection he has made to the bulb farms of Holland, and they have proved to be the most worthy of cultivation; the bulbs have all been carefully selected, and are from the bulb farms of the best and most experienced Dutch growers.

DAFFODIL, OR NARCISSUS.

The most beautiful of all Spring flowers is the Daffodil, and its hardiness is beyond all question. The older kinds have withstood uninjured our severest winters for centuries; and the new ones now offered have remained uninjured in the open ground during the late series of severe and protracted winters. Its blossoms withstand frost, snow, rain, and wind, longer than any other spring flower, and this was observed by Shakspeare, when he wrote—

"Daffodils,
That come before the swallow dares, and take
The winds of March with beauty."

THE ALDBOROUGH COLLECTION OF DAFFODILS, of which we are the fortunate possessors, is the most complete and unique set of hardy Daffodils ever brought together by an amateur, and exhibit in a most marked degree the industry and enthusiasm of their cultivator, the late lamented eminent horticulturist, the Rev. John Nelson, of Aldborough Rectory. The collection is represented by nearly 150 sorts, embracing almost all the kinds known to amateur horticulturists of the sixteenth, seventeenth, and eighteenth centuries, and to Sibbily, Sweet, Haworth, Herbert, and Baker of the present century, and in addition to these the recent new hybrid varieties which rank in point of beauty with the magnificent orchids which have been brought into cultivation within the last few years. These new hybrid Daffodils are the result of crosses between the different varieties of the Trumpet Daffodil and the varieties of Poeticus on the one hand, and the Trumpet Daffodil and Montanus on the other. Unfortunately, the gentlemen who produced such wonderful results, and made so many grand additions to a family already rich and varied, have left on record so little data, that we can but surmise how the work was accomplished. However, we know for certain that a cross between the Trumpet and Poeticus Daffodils gives Incomparabilis *Parkinson's Peerless Daffodil*. Assuming, therefore, that this result is followed by crossing Incomparabilis and Poeticus, what is more natural to expect than Barri, which is simply a reduced Incomparabilis. Then again cross Barri and Poeticus, and we imagine the outcome would be Burbidgei, which is a Poeticus with the crown somewhat larger and retaining the colours of the first hybrid, viz., Incomparabilis. The Eucharis like Daffodil, Leedsi, we think most likely a cross between Trumpet Albicans and Montanus and the most perfect of all hybrid Daffodils, viz., Nelsoni, would, we think, result from a cross between Trumpet Bicolor and Poeticus, or Macleai possibly assisted, as the Nelsoni's are large forms of this most perfect miniature Daffodil; besides the foregoing results in the production of hybrids there is amongst the new Daffodils of the Trumpet section great variety both in size and colour. These we conclude to be simply varieties resulting from seeding the Magni-coronata Group.

A remarkable feature in many of these hybrid Daffodils is the strongly marked orange-scarlet crown, which we imagine would come from Poeticus Poetarum; and others again have the crown dark yellow, light yellow, canary-yellow, primrose, silver-white, and some apricot-coloured. The late Mr. Nelson raised a few seedling Daffodils of considerable character, and had he lived a few more years, he doubtless would have made valuable additions to this family. The Rev. Wolley Dod has for some years past been forming a collection of Daffodils. We hope he will bring some of his energy to bear on the hybridization of this family, and from his personal experience tell us how all these beautiful modern varieties were made. Two Coloured Plates of New Daffodils issued with *The Garden* represent some of the hybrids alluded to above, and those who are desirous of acquainting themselves with the interesting literature of the Daffodil, and the monographs which have been written of this family, should purchase Burbidge's admirable work, which is beautifully illustrated, and written in a most charming style.

"It has been observed," says Mr. Burbidge, "that these beautiful Daffodils are never seen to better advantage than when planted on the moist margins of lakes and streams, or islands, where their golden nodding flowers contrast with the cærulean reflection in the limpid water below."

This seems also to have occurred to Keates, who, in one of his beautiful poems asks—

"What first inspired a bard of old to sing
Narcissus pining o'er the untainted spring?"

Shelley speaks of the Daffodils thus—

"And Narcissi, the fairest among them all,
Who gaze on their eyes in the stream's recess,
Till they die of their own dear loveliness."

Wordsworth pays a graceful tribute to the Narcissus—

"When all at once I saw a crowd
A host of golden Daffodils,
Beside the lake, beneath the trees,
Fluttering and dancing in the breeze."

CULTURE AND ADAPTATION.—The Daffodil may be grown in any soil and situation, but it thrives best in a fertile loam. In planting, the top of the bulb should be three to four inches below the surface; but when it is planted in permanent beds, &c., and summer flowers are cultivated over it, we have known the roots in such

DAFFODIL—continued.

cases planted at a depth of 12 inches. In beds the larger flowering Daffodils are charming, and for edgings the dwarf growing kinds are most beautiful. In flower borders and shrubberies groups of Daffodils look splendid. For naturalization in woodland walks, semi-wild places, on the margins of plantations, and amongst grass, few hardy flowers look so natural and pleasing.

A selection, consisting of varieties from the three groups, gives a succession of flowers from February till June. The Trumpet Section of Daffodils flower in succession, one variety following the other from February till the end of April. The Nonsuch Section of Daffodils begin flowering in March, and succeed each other till May. The third group of Daffodils is the Poet's Narcissus, and the Tazetta or Bunch-flowered Daffodils, these commence flowering early in April, and furnish a succession of flowers till June.

All Daffodils are most elegant cut flowers in vases, and can be had in abundance at a season when other flowers are scarce. They also supplement and mix admirably with hot-house flowers. For three months in Spring cut flowers from our collection of Daffodils will be exhibited at the various Spring Shows and Fortnightly Meetings of the Royal Horticultural Society, also at the Spring Flower Show held at the Royal Botanic Gardens.

Cheap Daffodils from Groups I., II., and III., to plant in Grass, Orchards, and by the side of Streams and Lakes.

N.B.—The Grouping of the Daffodils is intended to assist purchasers in making their own selections; each group represents a distinct feature in the shape of the flower, which is fully explained in the notes.

DAFFODIL, DAFFADILLY, DAFFADOWNDILLY, LENT LILIES, OR TRUMPET NARCISSUS.

GROUP I.—Magni-coronatae of Baker, Ajax of Haworth, Pseudo-Narcissus of Parkinson, and Bulbocodium or Corbularia (Hoop Petticoat or Medusa's Trumpet).

DISTINGUISHING CHARACTER.—Crown or trumpet as long or rather longer than the divisions of the perianth.

The first systematic arrangement of this family is found in Parkinson's "Paradisi in Sole Paradisus Terrestris"; or, A Garden of All Sorts of Pleasant Flowers," published 1629, the author describing 94 kinds of Daffodils. Haworth, in 1831, published his Narcissus Monograph as a Supplement to Sweet's "Flower Garden," and about the same time Dean Herbert embodied in his "Amaryllidaceæ" the result of a careful study of the genus Narcissus from living plants in English gardens. Baker's review of the genus Narcissus appeared in the "Gardeners' Chronicle," 1870. Burbidge's "History and Culture," with coloured plates and descriptions of all known species and principal varieties of Narcissus, was published 1875. Mr. Burbidge's book is written in a most charming style, and traces the literature of the Daffodil as far back as 1570, when Lobel alludes to the culture of the Narcissus.

The Aldborough Collection of Daffodils, which we have described in our present issue, embraces many very fine varieties, few of which were known to Mr. Burbidge in 1875. The new Daffodils are indicated by an *.

The Trumpet Daffodils flower in the following succession: Cambricus and Obvalaris generally commence in February, and are closely followed by Nanus, Minor, Spurius, the native Lent Lily (294), Lobularis, the early-flowering Bicolors Horsfieldi and Empress. These again are followed by Lorifolius and Lorifolius Emperor, Maximus, Major, Rugilobus, Bicolor, and Bicolor Maximus, Bicolor Primulinus, Princeps, etc.

The Grand Trumpeters include all the varieties of Bicolor, Lorifolius Emperor, Maximus, Princeps, Rugilobus, Telamonius, etc., with all the other new large Trumpet Daffodils, except Humei, Exquisite, and William Goldring; these three remarkable hybrids have the divisions of the perianth much overlapping the trumpet indicating in this cross a touch of Montanus; Bicolor primulinus, Bicolor J. B. M. Camm and Mrs. J. B. M. Camm are very distinct and beautiful; Cernuus pulcher is a beautiful white Ajax; Shirley Hibberd is elegant in outline; Hudibras is a very characteristic flower; John Nelson is the noblest flower in the group.

THE MOCK-DAFFODIL WITH CHALICE SHAPED CROWN.

GROUP 11.—Medil-coronatae of Baker, Queltia, Philogyne, etc., of Haworth, Peerless, Nonsuch, etc., of Parkinson.

DISTINGUISHING CHARACTER.—Crown half as long as the divisions of the perianth, but in one or two cases three-quarters as long.

It is pretty generally supposed that the varieties in this group are hybrids (excepting, perhaps, *Juncifolius*). It is true *Incomparabilis* is found wild in France and Spain, but Dean Heribert and others have produced it by crossing *Poeticus* with a Trumpet Daffodil. Macleai is considered by Baker between a *Tazetta* and a Trumpet Daffodil. The new hybrids described in this group, although we have no positive data as to the crosses, we think it may fairly be assumed that *Poeticus* and the Trumpet Daffodils gave all the varieties of *Incomparabilis*, which have always the crown yellow; *Poeticus* or *Montanus*, with *Cernua* or *Albicans*, gave the varieties of *Vincentii*, which have the perianth white, or sulphur-white, and the crown always canary yellow. The same cross would give *Leedsii* the Eucharis-like Daffodil, which has the perianth white, and the crown white, or primrose, changing to white. *Poeticus* and *Bicolor* would give *Nelsoni*. *Poeticus* and *Incomparabilis* would give *Barri*, which is a small *Incomparabilis*.

The varieties in this group commence flowering in March and furnish a succession till May.

THE SMALL-CROWNED DAFFODIL.

GROUP III.—Parvi-coronatae of Baker, True Narcissus, Hermioni and Haworth, the Primrose-Peerless and Purple-ringed Daffodils of Parkinson.

DISTINGUISHING CHARACTER.—Crown less than half as long as the divisions of the perianth.

In this series Poeticus is considered the true Narcissus; B-florus, Parkinson's Primrose-Peerless, is a supposed hybrid; Burbidgei is a hybrid belonging to the new Narcissi, and the connecting link between Groups 2 and 3. We assume that Poeticus and Barri gave Burbidgei. (See Coloured Plate in "The Garden," 1880.)

The early Poeticus commence flowering in March, and the late flowering close the Daffodil season towards the end of May. Gracilis and the Double White, No. 400, with the Gardenia-like flowers, are the last to bloom.

BUNCH-FLOWERED DAFFODIL (POLYANTHUS NARCISSUS) FOR BEDS, BORDERS, RUSTIC BASKETS, Etc.

The Bunch-flowered Daffodil is a decorative plant in beds, lines, or masses, and forms a fine contrast to the Tulip and the Hyacinth. The varieties under this heading are distinct, and the best for an effective display out of doors. In planting, the top of the bulb should be six to nine inches under the surface of the soil.

[Barr and Son,

POLYANTHUS NARCISSUS (BUNCH-FLOWERED DAFFODIL) FOR POT CULTURE.

The rich golden-yellow and snow-white flowers of the *Polyanthus Narcissi* during winter and spring, form a pleasing variety in the decoration of the conservatory and sitting-room. One to three bulbs may be grown in a pot. Culture the same as recommended for the *Hyacinth*, page 6.

The *Paper White* and *Double Ronau Narcissi* are invaluable for the autumn and winter decoration of the conservatory, and to eat for bouquets and vases. Commence potting in August, and continue throughout the autumn. When the bulbs are well rooted, commence forcing as recommended for the *Roman Hyacinth*, page 6, and flowers may be had from October.

THE TULIP.

The Tulip is extremely hardy, and of easy culture, flowering as freely in the shade as in the sunshine, and producing as fine flowers in a confined town garden as in more favoured places. Double and single Tulips, mixed, we recommend to be planted in front of shrubs, maintaining as they do a longer display, than if either are separately planted. In gardens where the flower beds must be kept gay from the earliest dawn of Spring, plant between the lines of Tulips, *Scilla sibirica*, *Chionodoxa luciliae*, *Snowdrop*, or *Crocus*, these flower first, and can be removed or cut down as the Tulip is coming into flower.

EARLY SINGLE TULIPS.

The Early Single Tulip has a greater variety of rich, delicate, and attractive colours than any other section of spring flowering bulbs. Of *sets*, beautiful scarlets, crimsons, whites, and yellows; of *white grounds*, striped or feathered with purple, violet, crimson, rose, puce, cerise, etc.; of *yellow grounds*, having crimson, scarlet or red flakes and feathers. Those only who have systematically cultivated the varieties of Early Single Tulips can form an idea of their beauty and diversity when massed in flower beds, or grouped in borders, or used for indoor decoration, grown three in a pot.

444 *Duc Van Thol, scarlet, with yellow edge.* The growers for Covent Garden Market plant this Tulip in shallow boxes very thickly, and force gently in a moderately moist atmosphere and give plenty of water. As the blossom colours, the plants are arranged in pots or jardinettes as required. 10s. 6d. per 100, 1s. 6d. per dozen.

EARLY SINGLE TULIPS, SELECT VARIETIES, FOR OUT-DOOR CULTURE OR FOR POTS INDOORS.

EARLY DOUBLE TULIPS.

Double Tulips have massive, brilliant, diversified, and beautiful coloured flowers, and are suitable for beds on the lawn, terrace, etc., also as edgings to Rose beds and shrubberies. Planted in groups of three or more in flower and shrubbery borders they are very effective.

The * indicates the best sorts for pot culture. For sectional lines, when the Early Single Tulip is planted in designs, the Tournesol, No. 521, is most valuable; it is also the best to force for early flowering, and is extensively grown for Covent Garden Market. Imperator Rubrorum is the best scarlet, and Tournesol Yellow the best of the yellows. For indoor decoration, the Tulip, Double and Single, should have the same cultural treatment as the Hyacinth. For beds or masses, Rex Rubrorum, scarlet, is the best to associate with La Candeour, white, and, so arranged, the effect is unrivalled amongst Spring flowers.

CROCUS.

The Crocus is one of the earliest flowers to open its blossoms in Spring, and deservedly occupies a prominent place in every garden. It is as a permanent edging to beds, when planted in triple lines of one or various colours, that the effect is most striking. No Spring display can surpass that produced by broad wavy bands of golden yellow, of striped, of purple, or of pure white Crocus, expanding their blossoms in February and March, with a brilliancy that elicits the most unbounded admiration. In lawns and pleasure parks, the Crocus and Snowdrop are extremely effective, planted in the grass. For several years past the grass at "Rotten Row" has been planted with Crocus, Snowdrops, Daffodils, &c., to the delight of visitors. In wild gardens, by the sides of woodland paths, etc., the Crocus should be associated with the sweet-scented violet, the primrose, and the oxlip.

CHEAP DUTCH CROCUS.

Quoted cheaply by the thousand to induce extensive planting in shrubbery borders, woodland paths, wild gardens, on lawns, in pleasure parks, etc. One season were planted at the lower grounds, Aston, about 50,000 Golden Yellow Crocus to edge off beds cut in the grass, and such was the gorgeous effect produced, that in February and March the skill of the artist failed to portray it. On another occasion, in the same garden, 20,000 purple, white, and striped Crocus were planted in alternate lines with Early Tulips.

CHOICE NAMED DUTCH CROCUS.

The following are large flowered named Crocus, recommended for planting in groups, edgings, select beds, or working out specific designs. There are purples of various shades, whites as pure as a snowflake, and yellows of brightest hue. Amongst the light striped sorts Sir Walter Scott stands prominently out, the flowers almost the size of a Tulip; and of the dark striped varieties, Pride of Albion is conspicuous. These named varieties are the best for pot culture. When grown in pots, plant thickly, and treat as recommended for the cultivation of the Hyacinth in pots, on page 6. When removed from under the ashes, place in an airy situation, and give water very freely.

SNOWDROP (GALANTHUS NIVALIS).

A bed of Snowdrops is seldom met with, and yet there is nothing more beautiful in the early Spring than a sheet of their snowy graceful blossoms. In planting, the bulbs should almost touch each other. A combination bed of surpassing beauty may be arranged, in the centre of the bed Snowdrops, with a deep edging of the bright blue

SNOWDROP—continued.

Scilla sibirica, or the Scilla may form the centre and the Snowdrops the edging. A third bed of these lovely spring flowers can be enjoyed by intermingling the bulbs, and to have the white and blue in equal proportions, plant two-thirds Snowdrops to one-third *Scilla sibirica* bulbs. When it is practicable such beds should be permanent, and to have them always furnished a selection of the March and April flowering Daffodils may be planted at a depth of six to nine inches, and on the top of these the Snowdrop and Scilla at a depth of four inches. When the spring flowers are past, top dress and plant the beds with surface rooting bedding plants, or annuals, such as Nemophila, Leptosiphon rosea, etc. *Chionodoxa lucilæ* (*The Glory of the Snow*) with its rich Nemophila blue flowers forms a charming contrast to the pure white of the Snowdrop. The Winter Aconite, with its emerald-green cushion of leaves might well be intermingled in these permanent beds, with the Snowdrop, *Scilla sibirica*, and *Chionodoxa*. The Snowdrop and the Crocus planted in alternate circles are very effective, and succeed each other so closely as not to leave a gap in the succession.

In beds of Tulips and Hyacinths, Snowdrops are very effective planted between the lines, as they are in flower while these bulbs are just moving the surface, and after flowering there remains an elegant green foliage to set off the massive blossoms of the Tulip or Hyacinth.

The Snowdrop is most generally used as a permanent edging, and in masses. In lawns and pleasure parks, dotted about in tufts, the Snowdrop looks charming nestling in the grass. The turf need not be disturbed in planting, but holes five inches deep should be made with a dibber, dropping in two inches of fresh soil, then three or more bulbs, keeping the holes about three inches apart. By planting Snowdrops on banks and grass slopes a beautiful effect is produced.

THE GIANT SNOWDROPS.

These large flowered species of Snowdrops are natives of the remote parts of Western Europe, and are distinguished from the common Snowdrop (*Galanthus Nivalis*) by broader foliage, larger flowers, and taller growth; where hardy bulbs are cultivated, these Giant Snowdrops should have a place. Figured in *The Garden*, 1877.

WINTER ACONITE.

The golden blossoms resting on an emerald-green cushion of leaves early in Spring look charming, and form a striking contrast to the pure white Snowdrop, the lovely blue *Scilla sibirica* and *bifolia*, *Chionodoxa lucilæ*, and the Spring Snowflake. The green carpet of foliage remains long after the flowers, which makes the plant valuable for situations where it is difficult to clothe the ground, as under trees, and in moist situations where few flowering plants thrive.

610 *Winter Aconite*, golden yellow, per doz., 6d.; per 100, 2s. 6d. to 3s. 6d.; per 1000, 21s. to 30s.

CHIONODOXA LUCILÆ (*The Glory of the Snow*).

For pot culture, 3 to 6 in a pot. Mr. Maw, in describing the circumstances under which he found *Chionodoxa lucilæ*, says, "At the lower level it was out of flower, but near the summit of the mountain a mass was met with in full splendour, forming one of the most sumptuous displays of floral beauty I ever beheld; a mass of blue and white resembling *Nemophila insignis* in colour, but more intense and brilliant." The *Chionodoxa lucilæ* was beautifully figured in *The Garden*, July 3rd, 1880; and in 1878 the Floral Committee of the Royal Horticultural Society awarded a First Class Certificate to this plant.

611 *Chionodoxa lucilæ*, home grown roots

SCILLA, WOOD HYACINTH—continued.

Walton. The fine Spanish varieties we offer are much larger and handsomer than our native plant, and are very effective in flower and shrubbery borders, and most valuable for wild gardens, woodland walks, and to naturalize. The white and red varieties are much in demand to cut for table bouquets and vases.

MUSCARL.

M. botryoides, the Grape Hyacinth, has a neat dwarf compact growth with flower spikes of dark blue, clear pearl-blue, and pure white. It is an admirable plant for edgings to permanent beds, and beautiful for pot culture, 6 bulbs in a pot. M. racemosum, the Starch Hyacinth, flowers with M. botryoides, but differs in having recumbent and more ample foliage and larger flower spike. M. moschatum, the Musk Hyacinth, has ineffective, but delightfully fragrant, flowers, and is valued on this account for pot culture. M. plumosum monstrosum, the plume-like appearance of its handsome flowers has secured to it the name Feathered Hyacinth; it is the last in this section to flower, and deserves a prominent place in every flower border. The Muscarl, like the Wood Hyacinth, is a fine plant for naturalization, continuing long in bloom, and not particular as to soil or situation.

LILY OF THE VALLEY (*Convallaria Majalis*).

The clumps of Lily of the Valley we quote have been specially prepared, and cannot fail to give abundance of flowers. In potting, leave the top of the crowns one inch below the rim of the pot; tight potting is of great importance, and care should be taken, in the first watering, that the moisture penetrates to the centre of the clump. The Berlin prepared crowns are now extensively used by the growers for Covent Garden Market, who put 20 to 30 crowns in a 5-inch pot; but the prepared clumps are preferable for private growers. The supply of first class clumps being limited, orders should be booked early, *for dispatch early in November*. As a novelty, we offer clumps of the Rose and of the double-flowered Lily of the Valley. *Forced under glass, the rose-coloured variety fades almost to white.*

CULTURE.—A moist atmosphere and abundance of water is indispensable to success in forcing Lily of the Valley; therefore, to encourage simultaneously the development of flower and foliage, most growers place the pots in a shady damp part of the house, or insert a flowerpot over the crowns, till the flower and the foliage have made some progress, when the plants are removed to a less shady situation. In a dry atmosphere, or through neglecting to give a sufficient supply of moisture, the crowns, technically speaking, "go blind."

DIELYTRA.

This is the most elegant of all forced plants for table decoration and furnishing vases. For conservatory decoration, the graceful pendant branches, loaded with beautiful red heart-shaped flowers, combined with the delicate green of the foliage, entitles it to a conspicuous place amongst plants. In sheltered situations out of doors this is a fine border plant.

658 Spectabilis fol. aureo-variegatis, 2 ft.per doz., 7s. 6d.; each, 9d. & 1s.		

SPIRÆA (*The Meadow Sweet of Japan*).

The large graceful feathery pure white fragrant flowers of Spiræa Japonica surpasses all else in this way. In forcing this plant, a moist atmosphere and abundance of water is necessary. Spiræa Palmata, the bright red feathery flower spikes of this plant are strikingly beautiful. Spiræa Japonica fol. aureo-reticulatis is a unique plant, forces the same as S. Japonica, and is remarkable for the fine yellow veining or reticulation of the leaves; a very striking plant in a conservatory. These are exceedingly decorative plants for the conservatory, and the flowers are prized for bouquets. In sheltered moist borders out of doors these plants are very decorative.

CULTURE under glass is the same as recommended for Lily of the Valley.

King Street, Covent Garden, 1882.]		[Wood Hyacinth, Muscari, Lily of the Valley, etc.

IRIS.

The Iris is the "Orchid" of the flower garden, being the richest and most varied in colour, and diverse in form. All are perfectly hardy, and should be extensively planted in flower and shrubbery borders; also for naturalizing and in wild gardens; once properly planted, they require no more care. As a cut-flower the Iris is invaluable, competing with the choicest and the most beautiful Orchids in richness and variety of colour, with the most remarkable combinations, such as characterise the wonderful diversity in Orchid flowers. A judicious selection of Iris should include the finest in colour and form, and the most quaint in colours and combinations, and give a succession from Christmas to August, at an outlay barely the cost of a specimen Orchid. *Iris Alata*, *Reticulata*, and *Stylosa*, flower in winter. It is not an unusual thing to see *Iris Reticulata* with its rich violet gold-blotted fragrant blossoms expanded, the ground being covered with snow, and the thermometer several degrees below freezing point. Following comes the violet-scented *Persica*, with its delicate pearly flowers, inlaid with purple and gold. Next in succession the beautiful *Iberica*. Then follows *Pumila*, and varieties in the section of Dwarf Iris. Close after these comes the *Barbata* group, with kindred species and varieties, having an endless variation in colour, ranging from white and the richest golden yellow, to rose, intense purple, and most beautiful bronzes. The Beardless section then continues the succession in *Sibirica*, with its pretty small orchid-like blossoms; *Orientalis*, with velvety blue flowers; *Graminea*, with graceful foliage and characteristic blossoms; *Setosa*, with charming blue flowers; *Versicolor*, *Virginica*, etc.; following these, the clematis-like Japanese Iris, *Kämpferi*, with large flowers, varying from snow-white to rose, lilac, magenta, purple, crimson, and violet; and with flowers of different sizes, 5 to 10 inches in diameter, with a breadth of petal $2\frac{1}{2}$ to 3 $\frac{1}{2}$ inches. A coloured Plate of two magnificent varieties, *Imperatrix* and *Schöne Wienerin*, appeared in *The Garden*, 30th August, 1879. We exhibited cut flowers of *Iris Kämpferi* on the 6th July, at the Royal Botanic Flower Show, and they were much admired. The Spanish Iris precede *I. Kämpferi*, with flowers snow-white, porcelain-blue, clear yellow, and rich chestnut, having combinations of mottlings such as are only to be found amongst rare and curious Orchids. After these come the English Iris, with large sumptuous flowers, representing almost every shade of colour, distinct or in combination; thus the succession, in conjunction with *I. Kämpferi*, is carried to the end of July, the close of the Iris season. The only plants by which one can compare the magnificence of English Iris are *Lælias* and *Cattleyas*, the Queens of Orchids. We had almost forgotten the pretty *Peacock Iris*, the wonderful *Iris Sustana*, with its large, dusky, curiously and beautifully reticulated flowers, the *Variegated-foliated Iris*, which is valuable in vases and effective in the flower garden, and the charming little *Iris Cristata*, a glorious plant on dry banks; these, with the handsome Beardless sub-aquatic Iris are links in an unbroken chain.

To cut for filling vases and for table bouquets, all the Iris are admirably adapted, and when necessary to forward the flowers to a distance, cut them just before expanding; like the Gladioli, the blossoms open in water. The effect is greatly enhanced if the individual flowers are arranged in wet sand or moss.

ENGLISH IRIS (THE LARGE BULBOUS IRIS OF SPAIN).

This magnificent Iris thrives best in well-drained soil; when planted in heavy soil surround the bulbs with sand. When convenient plant as soon after the beginning of September as possible, although we have planted as late as December, and even in January; but the earlier the planting is done the better. The varieties described are distinct, and as strikingly beautiful and varied in colour as the most sumptuous orchids of the hot-house.

Annual exhibits of flowers of this grand Iris we shall make at the Meetings of the Royal Horticultural Society.

S. is used to signify the Standards or erect petals, *F.* the Falls or drooping petals.

SUNDY IRIS, BULBOUS, &c.

Under this heading all the Iris are hardy and beautiful. *Atata* is in flower variously from September to Christmas. *Histroia*, if the weather is open, flowers at Christmas; *Reticulata* follow soon after, and if grown under glass may be had in flower with the early forced bulbs in December; the flowers of *Reticulata* are delicately fragrant, and the colours intensely rich; a most charming pot plant. Out of doors *Reticulata* continues decorative from February till April, expanding its sweet-scented blossoms at a temperature too low even for the Narcissus to bloom. *Persica* flowers about the same time as *Reticulata*, the flowers emitting a delicate violet perfume, and is equally prized in the conservatory and flower garden. *Pavonia* (the Peacock Iris), more correctly *Morea Pavonia* or *Vieussenia Pavonia*, expands its delicately coloured flowers in May and June, and is cultivated the same as the *Ixia*. *Caucasica* is a very curious plant, the flowers are primrose-coloured, and the foliage silver-margined. *Lusitanica* is remarkable for its rich yellow flowers: *Lusitanica sordida* is a noble plant. *I. Sustiana* has large dusky brown flowers, beautifully netted with dark lines, and is a plant always admired. *I. Iberica* is a species in the way of *Sustiana*, but the colours are brighter.

Xiphion latifolium. The English Iris are varieties of this species.
Xiphion vulgare. The Spanish Iris are varieties of this species.

THE FLAG OR EVERGREEN IRIS.

The following Sections of Iris have rhizomatous roots and flag leaves. The family has a wide range of habitat; being found more or less in almost every country and at almost every altitude, from the dell to the mountain top, with considerable variations of colour and form, and with much diversity of growth, ranging from the miniature *I. Cristata* of the North American uplands to the tall *Pseudo-Acorus* of the British marshes. The varieties commence blooming with our Spring flowers, and continue a floral display till the end of July. Some of the dwarf species make admirable edgings, and others are very effective on rockwork; the taller growing kinds are magnificent objects in flower and shrubby borders, also for naturalization and to plant in woodland walks, and round the margins of lakes, ponds, etc., many of the family being marsh aquatics. The flowers vary in size from the miniature to the most sumptuous, and for decorative purposes compete with the most beautiful Orchids. For filling vases few cut-flowers will compare with the Iris. The individual blossoms placed on flat dishes in wet sand or moss look beautiful on the table. When Iris flowers have to travel some distance, cut them just before expanding.

IRIS KÄMPFERI (the Clematis-like flowered Japanese Flag Iris).

The magnificence of these splendid new Japanese Iris surpass any written description that we could give of them. The large flat flowers measure from 6 to 8 inches in diameter, with a breadth of petal 3 to 3½ inches, and the prevailing colours being white, magenta, crimson, rose, lilac, lavender, French grey, purple, violet, and blue, each flower usually representing several shades, while close under the petaloid stigma is a brilliant yellow or orange blotch or feather more or less conspicuous, and always surrounded, except in the whites, by a halo of blue or

IRIS KÄMPFERI—continued.

violet. The young flower, as it unfolds, frequently exhibits a different hue to that represented after the lapse of a few hours; thus the newly expanded flower will present an intensity of colour, and exhibit a rich bloom over the surface of the blossom, which is perfectly charming. Figured in *The Garden*, 1876 and 1881.

CULTURE.—A naturally good adhesive, moist, loamy garden soil, laying well to the sun suits this plant. For example, on the moist Bagshot soil, in Mr. Stevens' garden the plant makes very strong growth, and flowers with remarkable freedom. When a soil has to be specially prepared, we recommend leaf soil, loam and peat in equal parts; but manure should not be given unless thoroughly decomposed or as a liquid. We are of opinion that the Iris Kämpferi is semi-aquatic, and would recommend those who have the opportunity to try it as such. G. F. Wilson, Esq., Heather Bank, Weybridge, has this season been very successful in his culture of Iris Kämpferi, and has promised our Mr. Barr that he will give this magnificent plant his special attention, and work out its actual requirements for this country, and so assist his brother horticulturists who possess fewer opportunities to grow successfully this valuable plant.

NEW IRIS KÄMPFERI.

IRIS BARBATA, THE BEARDED IRIS, COMMONLY CALLED GERMAN OR FLAG IRIS.

Our collection of this Section of Iris is very large and complete. Those enumerated in this list are a selection. The flowers are all large and very handsome, more or less beautifully mottled in the standards, and reticulated in the falls; the beards ranging from delicate primrose to orange, and the petaloid stigmas frequently enhancing the general effect by their contrast of colour. We name these points in the flower, as we have not attempted to describe them in detail, giving only the colours which strike the eye on first looking at the blossom. There is, however, no flower that so improves on examination. At first sight the beauty is equal to the Orchid, but, on closer examination, we have no hesitation in saying there are points of interest surpassing the finest Orchid. Of colours there are the richest yellows, the most intense purples, the most delicate blues, the softest mauves, and the finest claret-reds. There are whites and primroses, and every imaginable shade of bronze, from the rich glittering browns to the most aesthetic combination of hues—indeed, language fails in picturing the beauties of this flower, so that our descriptions fall short of the reality; and this will be best understood by examining a blossom, in almost any one of which may be found 10 to 20 different shades, blended in such a manner as to fill one with feelings of enthusiasm.

S. is used to signify the Standards, or the erect petals; **F.** the Falls, or drooping petals.

 850 Wallncriana, *S.* copper, tipped with bluish violet, *F.* pale yellow tipped blue.
 851 Walner, *S.* azure-blue, *F.* light purple, slightly veined white at base.
 852 Walter Scott, *S.* bronzy yellow tinted with purple, *F.* crimson suffused purple.

BEARDLESS SPECIES OF FLAG IRIS.

This section of Iris is altogether different to the Barbata or Bearded group. There are some grand marsh aquatics amongst them, notably *Aurea*, *Mouneri*, *Ochroleuca*, *Goldenstadtii*, *Spuria*, and the varieties of *Pseudo-Acorus*; not only are these majestic in growth, but the flowers are beautiful. All the Iris in this group, excepting *Cristata*, *Iberica*, *Stylosa*, *Susiana*, *Tectorum*, and *Tuberosa* may be grown as Marsh Aquatics; *Cristata* is charming on dry banks and rock-work; *Iberica* and *Susiana* require a dry hot situation such as the bottom of a south wall; *Festidissima* is valuable for damp shady places; *Tectorum* is found on the thatched roofs of houses in China. *Cristata*, when happy, forms a tuft, and covered with its beautiful amethystine blossoms, becomes the gem of the garden.

IXIAS, MORPHIXIAS, SPARAXIS, TRITONIAS, AND BABIANAS.

CULTURE IN-DOORS.—From September to December plant in a five inch pot five or six bulbs, using a compost of turf loam, leaf soil, and silver sand. Make the soil firm about the bulbs, then plunge the pots in ashes in a cold pit or frame, and withhold water till the plants appear, then give sparingly at first. Except during wet or frosty weather, the lights should be left off. Early in February, the plants having made sufficient growth, remove them to the greenhouse, and carefully attend to the watering.

CULTURE OUT-DOORS.—Plant from October to January, at a depth of three to four inches, and two to three inches apart, in a prepared light loamy soil, thoroughly drained, the bed raised a few inches above the general level, with a due south aspect. Should the earlier plantings make foliage in autumn, protection must be given during severe frost, and this is best done by hooping the beds over, and, when necessary, covering with mats; or Tiffany may be used, remaining on till the danger from severe frost has passed. The plantings made in December and January need no protection beyond a little fern, which gradually remove in spring as the plants spear through it; as these late plantings will flower later in summer than the earlier ones, select a situation for them where the sun's rays will be somewhat broken, and the blooming period will thereby be prolonged.

IXIAS.

The Ixia is a slender graceful growing plant, with long loose spikes of bloom. The colours are rich, varied, and beautiful, the centre always differing in colour from the other parts of the flower, so that the blossoms expanding in the sun's rays, present a picture of gorgeous beauty.

The descriptions refer to the flowers when open; when closed, most of the yellows and the whites have the outside of the petals red or purple; thus, the brilliant display is in the expanded flowers.

SPARAXIS.

It would be difficult to conceive colours more diversified and gorgeous than is represented by the Sparaxis, and one can well appreciate Mr. Saunders' observation, "that he has seen the knee of an enthusiast bent and gymnastics performed over a bed of these, without feeling at liberty to condemn the performer." The fine compact dwarf growth of the Sparaxis, and its rich beautiful colours, marks its suitability for pot culture.

TRITONIAS.

The habit and growth of these resemble the Sparaxis, but the prevailing colours differ, and flowering later, they form a most important succession. The colours range from buff to rose and the richest glowing orange, the flowers always having a beautiful transparency. At Cliveden, Mr. Fleming was in the habit of growing hundreds of pots of *Crocata* for furnishing jardinettes.

BABIANAS.

The flowers of the Babiana range in colour from blue to the richest crimson-magenta, and set off by a dark green hirsute foliage, they form a striking contrast both in flower and foliage to the Sparaxis and Tritonia. The Babiana has the same fine dwarf compact growth, and is a good companion plant to Sparaxis and Tritonia, in pots or out of doors.

THE RANUNCULUS.

In the Ranunculus flower, there is both diversity of shade and colour, which, combined with its symmetry and compactness, makes it, as a cut flower, as useful as the Rose. The Ranunculus flowers in May and June, and is much used for beds, ribbons, masses, and edgings, both in mixed and in separate colours.

CULTURE.—Plant the Turban Ranunculus from October to March, and the Persian varieties from January to April. It is in a somewhat moist soil which has been trenched deeply, the Ranunculus does best, but any good loamy soil, which has been properly prepared, will do. When the soil works kindly, and the day is dry, draw drills two inches deep, and five or six inches apart; at the bottom of the drill sprinkle a little sand, press the tubers firmly into the soil, claws downwards, and cover with sand, then with soil, keeping the crown of the tuber two inches under the surface. Cover the early plantings with dry litter, leaves, or old tan during severe weather, and this remove before the foliage in Spring gets injured. In April and May, during dry weather, water the beds freely two or three times a week, and when the flower-buds appear water if necessary daily, and continue doing so while the plants are blooming, taking every care not to wet the foliage if possible.

DOUBLE PERSIAN RANUNCULUS FOR BEDS, RIBBONS, AND MASSES.

The named varieties have been selected on account of their large flowers and fine colours.

TURCO-PERSIAN NEW LARGE-FLOWERING RANUNCULUS.

This new race of Ranunculus is remarkable for a vigorous growth and an extraordinary floriferous character; the plants attain a height of about 18 inches, and produce from 10 to 15 blossoms. Where cut flowers are in demand, these new Ranunculus are most valuable; flowers may be gathered from the same bed several times a week without impairing the display.

THE ANEMONE, OR WINDFLOWER.

Anemone flowers embrace searlets, roses, blues, and purples of the most dazzling hues, and the purest white, also endless variations in stripes. The habit of the plant is excellent, and the foliage elegant. For beds, edgings, and masses where Spring flowers are grown, it is matchless, and may be had in bloom, weather permitting, from November to July, according to situation, locality, and time of planting. For naturalization and wild gardens it is of great value, and a charming plant in orchards and grass. The graceful Anemone fulgens we have seen producing its brilliant flowers at Christmas and in July. The snow-white Anemone "The Bride," is a most important introduction, and, as a cut flower, of the greatest possible value, the beautiful snow-white saucer-shaped blossoms, resembling large flowers of the Christmas rose grown under glass. Anemone Stellata (the Starry Windflower) is well known as an elegant plant to those who have spent a winter at Nice, Cannes, and Mentone. Anemone Apennina (the Blue Mountain Windflower), during March and April, makes the most charming cushions of blue in the flower border, and its white companion, A. Apennina alba, is most lovely in masses. Anemone Blanda is a most important plant; it resembles A. Apennina in flower, but is deeper in colour, and flowers a month earlier. If the Anemone is required for indoor decoration, after potting plunge the pots to the rim out of doors, and there let them remain till the flower buds appear, then remove them indoors.

CULTURE.—Any good soil, moderately well drained, suits the Anemone. In its native habitat it grows mostly in vineyards and oliveyards, where it is partially protected from the sun's rays and drying winds, the most potent enemies to Spring flowers. Plant in succession from August to April, the roots four to six inches apart, and at a depth of two to three inches, and this should be done when the ground is in good working condition and on a dry day.

NEW DOUBLE POPPY ANEMONES, FOR BEDS AND MASSES.

The flowers of the Double Poppy Anemone resemble a semi-double Hollyhock, and are extremely handsome. When planted from September to December, they flower in succession during the early Spring months, and those planted from January to April flowering in succession from April to July.

ANEMONE FULGENS (SCARLET WINDFLOWER).

This is the most brilliant and graceful of all Winter and Spring flowering Anemones. The rich dazzling scarlet flowers and light elegant growth render it the most attractive scarlet flower of Spring. It is valuable for table bouquets or vases, as it lasts a long time in water. If the roots are planted early, flowers may be gathered from Christmas, and, by successional plantings, from August to April, a continued display is maintained till July.

SUNDY ANEMONES.

Anemone Apennina, the blue Mountain Windflower, forms a dense cushion of rich blue, and is one of the loveliest dwarf Spring flowers and, when associated with *Triteleia conspicua*, the delicate porcelain flowers of the one blend most charmingly with the rich bright blue of the other. *A. Blanda* resembles *Apennina*, but is deeper in colour and flowers a month earlier. *A. japonica*, white, rose and red, are the most decorative of Autumn-flowering herbaceous plants.

CYCLAMEN.

Cyclamen Persicum, during the Winter months, is brought to Covent Garden Market in large quantities, many of the specimens having upwards of two hundred flowers, and realizing very high prices. This Cyclamen is an indispensable plant for indoor decoration, and few flowers are more highly prized for button-hole bouquets, ladies' dresses, and finger-glasses. In Ireland, and a few favoured places in England, such as Cornwall and the Islands adjacent, it is hardy, and flowers out of doors. It is, however, preferable in all cases to plant out only the European species, which are quite hardy, and uninjured by the severest frost, excepting *Vernum* and *Repandum*; these we recommend to be grown on rockwork, and protected with leaves or litter till February or March, the foliage then begins to appear, and the flowers come in April.

All the European Cyclamen are hardy; they require perfect drainage, and should be sheltered from the cutting winds of March and April, and the hot rays of the Summer sun; planted at the bottom of old walls and on rockwork, they are very beautiful; or nesting in the grass, near the roots and under the shelter of old trees, the effect is most charming. European commences flowering in July; the *Hederifolium* varieties follow in Autumn; and *Atkinsi*, *Ibericum*, and *Comum* are Winter-flowering; *Repandum* and *Vernum* close the Cyclamen season in April. These hardy Cyclamen are beautiful pot plants when skilfully cultivated. According to the latest investigations, the genus *Cyclamen* divides itself into five specific heads or types, thus:—*Europæum*, Summer-flowering; *Hederifolium*, Autumn-flowering; *Persicum*, Winter-flowering; *Ibericum*, of which *Atkinsi* and *Comum* are varieties, Winter-flowering; *Vernum* and *Repandum*, Spring-flowering. Thus, out-of-doors, *Europæum* flowers July and August; *Hederifolium*, August to November; *Ibericum*, December, January, February, and March; *Vernum* and *Repandum*, April.

Cyclamen Europæum, we have these roots collected on the Alps. The flowers are delightfully fragrant, and the foliage beautifully variegated; it is a fine species for rockwork, and to plant at the bottom of old walls and to naturalize in the grass, or to plant in wild gardens. *Ground roots*, 25s. per 100.

The varieties of *Cyclamen Hederifolium* have beautiful *Anectochilus*-like variegated leaves, which are decorative during Autumn and Spring, being uninjured by the weather. When gazing in Winter on masses of this beautiful foliage, we have felt surprised that not more advantage has been taken of it for Winter beds, and intermingling with it for a succession of flowers *Scilla bifolia*, *Scilla sibirica*, *Chionodoxa luciliae*, *Leucojum vernum*, *Narcissus nanus*, and *Snowdrops*. In Autumn, from the ample foliage of *C. Hederaefolium*, rises a profusion of beautiful magenta-coloured flowers, and if these in Spring were followed by all or either of the bulbs named, a succession and variety so charming would be produced that we must leave the reader to imagine the effect.

Cyclamen Persicum may be cultivated in a cool greenhouse or a cold frame with a little protection. They make vigorous plants in a stove or orchid house. In well-managed establishments, during Winter and Spring, *C. Persicum* is of necessity one of the principal decorative plants.

*We keep all the Cyclamen in pots ready to send out, except the roots of *Europæum*; these at 25s. per 100 are lifted from the bed as wanted.*

1109 Seed saved from the Large Flowered Prize Varieties of *C. Persicum*, 2s. 6d. and 3s. 6d. per packet. Seedling plants, when properly cultivated, make fine specimens in about 12 months.

1110 *Cyclamen Persicum*, large flowered varieties, 15s., 21s., 25s., and 30s. per doz.; 1s. 6d., 2s., 2s. 6d., and 3s. 6d. each, according to size. Large specimens, 5s. 6d., 7s. 6d., 10s. 6d., 12s. 6d., 15s., and 21s. each. *Plants in flower can be supplied from December at market prices.*

FUNKIA, OR THE PLANTAIN LILY.

Early in Spring the Plantain Lily develops its handsome ornamental foliage, while in Summer and Autumn it throws up a profusion of spikes of fine Lily-like flowers. In mixed borders of herbaceous plants the Plantain Lily takes a prominent position, there being great diversity of foliage in size, shape, and colour, as exemplified in the massive glaucous-green leaves of *Sieboldiana*, the massive light fresh green foliage of *Subcordata grandiflora*, the large heavy green leaves of *Ovata*, and its beautiful golden-variegated variety; to match these four great leaved Plantain Lilies it would be difficult, or to find more handsome hardy plants in flower and foliage, whether for flower borders, sub-tropical gardens, or shrubberies, or to naturalize in wild gardens, and as distinctive objects in grass. *Ovata glaucescens* and *viridis* rank next in order of size—the one remarkable for its handsome golden-variegated form, and the other for its beautiful silver-margined variety, than which as edgings to large beds two more remarkably striking plants are not to be found ; in confirmation of this remark we refer our readers to Hyde Park. The Undulata varieties have smaller leaves than those described and are suitable for beds of less dimensions. The *Ovata spathulata* varieties have the smallest leaves of all, and make charming neat compact edgings. The leaves of *Ovata plantaginifolia* are characteristically distinct. All Plantain Lilies are good plants for naturalization. For pot-culture under glass we especially recommend for their flowers the two white-flowered varieties, viz., *Subcordata grandiflora* and *Ovata spathulata speciosa*, and of the variegated-foliaged varieties *Ovata glaucescens variegata* and *Ovata viridis marginata*. In shady and somewhat moist situations the Plantain Lily attains its finest development. We have a very large stock, and have quoted extremely low prices. In closing our remarks, it is but just to the editor of *The Garden* to say that his prophetic statements of last year have been amply fulfilled in the greatly extended use of this grand family of hardy ornamental plants.

HERBACEOUS HARDY CHINESE PÆONIAS.

These are noble plants, competing favourably with the finest hybrid Rhododendrons in general effect, variety of tint, diversity of colour, and profusion and duration of bloom. Combine these qualities with a handsome, massive foliage, accommodating habit, and easy culture, and you have a plant to occupy the place of, or to associate with the Rhododendron. These Pæonias succeed in any ordinary garden soil, and are equally adapted to intermingle with shrubs, or to take their place amongst herbaceous plants in flower borders and wild gardens.

The first flowers are large, massive, and most perfect in outline, the secondary flowers are neat and beautiful ; indeed, it would be difficult to conceive a more decorative and generally useful plant, rivalling in effect the Rhododendron, and possessing the symmetry and fragrance of the Rose. As a cut flower it is priceless, travelling admirably, and affording the utmost variety of shade and colour, from snow-white to the most intense crimson-magenta. See plate in *The Garden*, 1880 and 1881.

CULTURE.—Trench the ground as deeply as possible, and add abundance of rotten manure, and in Summer, when convenient, give a plentiful supply of liquid manure. The Pæony may be planted in any position, but, considering that the flower buds are formed early in the season, a situation is preferable where the sun's rays do not fall upon the plant till after 10 or 12 o'clock.

The editor of *The Garden* (Mr. William Robinson) suggests beds of Pæonias, associated with Lilies and Gladiolus, and edged with Plantain Lilies ; the best and most massive of the plain leaved Plantain Lilies are *subcordata grandiflora* for light green, *Sieboldii* for a blue-green, and *Ovata* for a dark green foliage ; and of the variegated leaved kinds, *Viridis marginata*, silver-edged, and *Glaucescens variegata*, golden-variegated foliage.

THE GLADIOLUS.

RAMOSUS, AND OTHER EARLY-FLOWERING GLADIOLI.

These beautiful early-flowering Gladioli are not so stately as the French varieties of Gandavensis, but they come into bloom much earlier, and are prized on this account in the general succession of flowers. Where cut flowers are required, these should be extensively cultivated. The snow-white flowers of Colvilli, "The Bride," are exceptionally valuable, and are extensively grown to cut for the supply of Covent Garden.

CULTURE.—Trench the ground, working in plenty of rotten manure in the underspit; plant the varieties of Colvilli, Cardinalis, and Byzantium from the beginning of October, and the others from November till March, at a depth of six inches. If the summer is dry and the weather hot, a good soaking of water or liquid manure twice a week greatly benefits the growing plants.

CULTURE FOR CONSERVATORY DECORATION.—Plant three in a five or six-inch pot, and plunge in ashes in a cold frame or pit, and withhold water till the bulbs have started into growth; or, the pots may be buried in ashes out of doors, as recommended for the Hyacinth, and there allowed to remain undisturbed till ready to remove indoors. It is customary with some to plant several bulbs close together in the open border, and, when the flower begins to colour, lift without breaking the ball, pot, and place indoors. So treated, the flowers expand as if the bulbs had not been disturbed.

AMARYLLIS.

Under this heading there are plants arranged very different in character, and requiring separate treatment.

THE GUERNSEY AND BELLADONNA LILIES.

The flowers of the Guernsey Lily are brilliant scarlet, and when seen with the sun's rays on them have the appearance of being spangled with gold-dust. The flowers of the Belladonna Lily are large, pure white, flushed rose-purple, and produced in umbels of many blossoms.

The Guernsey and Belladonna Lilies are received by us *early in September* in bud. The supply being always uncertain, orders for them should be given as soon as possible after the 1st, and not later than the 15th September. When executing orders for the Guernsey and Belladonna Lilies, we carefully examine the flower-bud of each, and send only such as give promise of good flowers. Delay in transit, neglecting to plant immediately, or, perhaps, an undeveloped defect in the flower-scape, often leads to partial failure, and as we cannot hold ourselves responsible for such contingencies, purchasers are recommended to buy an extra quantity, especially as the roots are so very inexpensive.

CULTURE.—Immediately the Guernsey and Belladonna Lilies are received, pot them in light soil, prepared cocoa-fibre or moss, and give water liberally. Bulbs of Guernsey Lilies, purchased after the flowering season, should be potted and treated the same as recommended for *Vallota purpurea*. Bulbs of Belladonna Lilies plant under a south wall at a depth of one foot.

HARDY AMARYLLIS.

The Belladonnas in Autumn produce large umbels of beautiful rich, delicately coloured flowers, and in pots are very effective for conservatory decoration. Grown out of doors, plant at a depth of one foot, under a south wall, or immediately in front of a greenhouse; there, undisturbed, they will annually produce gorgeous umbels of flowers. The varieties *Longifolia* (*Crinum*) are fine, produce large umbels of beautiful funnel-shaped sweet-scented blossoms, and are admirable plants for flower borders. *Candida* (*Zephyranthes candida*) "The Flower of the West Wind," is a near edging plant, and decorative planted in groups; in autumn it throws up a profusion of white Crocus-like flowers. *Lutea* (*Sternbergia lutea*), "The Lily of the Field," is also a good bulb for edgings, and in groups, its rich golden-yellow Crocus-like flowers, expand in Autumn from the midst of a bright fresh green foliage; it is perfectly hardy.

VALLOTA PURPUREA AND THE JACOBEA LILY.

Vallota purpurea, known also as Scarborough Lily, is most valuable as an Autumn-flowering plant, and as a cut flower for filling vases. *Amaryllis formosissima*, the Jacobea Lily, is a quaintly-shaped beautiful flower, and forces well, and should be potted in succession for Spring decoration. In May the dry bulbs can be bedded out or planted in the flower borders for Summer flowering. *Vallota purpurea* we recommend to be planted out of doors in May, and when in bud potted up for conservatory decoration.

Gladiolus, Hardy Amaryllis, etc.]

[Barr and Son.]

CHOICE GREENHOUSE AMARYLLIS.

These are grand plants in the conservatory, and valued for table decoration, or to cut for table bouquets. With management the varieties in this section may be had in bloom for many months. Cleopatra, with its crimson-scarlet flowers and central white line in each petal, combined with its robust constitution and finely formed flowers, we recommend as one of the very best. The unnamed seedlings we highly recommend; they are from a fine stock, and are sure to please, both as regards variety and beauty of flower.

CULTURE.—Immediately after potting, place in a moist temperature, and, if convenient, plunge the pot to the rim in a gentle steady moist bottom heat; thus treated, a vigorous leaf growth is produced, and a large umbel of flowers secured.

THE LILUM.

The Lily is matchless amongst hardy plants for variety of colour, chasteness, and beauty of form. It commences flowering in May, and maintains a continuous unbroken succession of species from different countries till the frosts of autumn destroy the last unexpanded flower bud; thus it is unequalled for its successional display, and is an important plant to associate in beds with Rhododendrons, Paeonias, Double Pyrethrums, and Herbaceous plants.

CULTURE OUT OF DOORS.—In its native habitat the Lily is usually found growing amongst brushwood or long grass, in soils of varied texture, but always sweet and well drained; so that in choosing a situation for planting, perfect drainage, natural or artificial, should be the first consideration. The borders of Rhododendron and Azalea beds are generally suitable for Lily culture, as the necessary compost for the particular species can easily be given, and the shelter from the surrounding branches is beneficial in protecting the plants in spring, and affording a partial shelter from the sun's rays in summer; amongst dwarf shrubs, or herbaceous plants, and in the proximity of trees, the Lily makes the most satisfactory growth, care being taken that there is always sufficient exposure to prevent the plants from making a feeble growth. In the preparation of ground for Lilies, loosen the soil to a depth of several feet, add fresh loam, coarse sand, good peat, or sweet decomposed leaf soil, care being taken that the soils are free as possible from insect life, and the compost sufficiently friable not to cling to the bulb. Plant the bulbs 6 inches deep, and if all things are equal they may remain undisturbed for many years. The bog or swamp-loving Lilies, Superbum, Canadense, and the varieties of Pardalinum require a moist peaty soil. Rockwork and artificial mounds, such as may be seen in the Edinburgh Botanic Gardens, are admirable for lilies, there being sufficient choice of aspects, soil, and drainage—thus the majestic bog-loving lilies would occupy the base with marsh plants, and the other species such positions as are best suited to them.

Those with a * do best in loam and leaf soil: † sand and leaf soil, in warm situations; ‡ peat with a little loam.

CULTURE IN-DOORS.—When grown in pots the Lily should have a compost of fibry loam and good peat, with plenty of sand, or sweet leaf soil and loam with sand, the bulb potted firmly and the top covered at least two inches; this done, plunge the pots in ashes out of doors and under a north wall, and there let the Lilies remain till they spear through the ashes, or, still better, till the flower buds are formed; at this stage remove to the conservatory, corridor, or sitting-room. Lilies in pots, when removed from the ashes, should have clear liquid manure twice a week. The drainage of the pots must be good, and no stagnant moisture tolerated in the plunging ground. Superbum, Canadense, and the varieties of Pardalinum, prefer moist sandy peat.

In the *Gardeners' Chronicle*, 1871, J. G. Baker, Esq., Royal Herbarium, Kew, gave a monograph of the Lily, and separated the family into four groups as follows:—

Group 1. " EULIRION (funnel-flowered Lilies).—Perianth funnel-shaped, horizontal or slightly drooping, its divisions broadest above the middle, narrowed gradually to the base, spreading only in the outer quarter when fully expanded; filaments and style all parallel with one another;" e.g., Candidum, Cordifolium, Japonicum, Longiflorum, Neigheriense, Rubescens, Wallachianum, and Washingtonianum. These species are all fragrant, and out of doors one or other of them commence flowering in July, cultivated under glass they will flower earlier.

Group 2. " ARCHELIRION (open-flowered Lilies).—Perianth broadly bell-shaped, horizontal or slightly drooping, its divisions ovate, broadest below the middle, not unguiculate, spreading from below the middle when fully expanded; stamens diverging on all sides;" e.g., Auratum, which has been called the Queen of Lilies; Speciosum, the introducer described as "all rugged with rubies and garnets, and sparkling with crystal points"; and Tigrinum, not inappropriately called the Prince of Lilies. These species commence flowering in July, and keep up a succession of flowers till October.

Group 3. " ISOLIRION (erect-flowered Lilies).—Perianth broadly bell-shaped, quite erect, its divisions oblong-lanceolate, broadest about the middle, in most of the species narrowed suddenly downwards to a distinct claw, spreading in the upper third or half when fully expanded; stamens diverging on all sides;" e.g., Bulbiferum, Catesbeii, Concolor, Croceum, Davuricum, Philadelphicum, Pulchellum, and Thunbergianum (Elegans). The species and varieties of this group commence flowering in May, and keep up a succession of flowers till end of July.

Group 4. " MARTAGON (Turk's Cap Lilies).—Perianth broadly bell-shaped, always drooping, its divisions lanceolate, broadest about the middle, not distinctly unguiculate, reflexed (usually from half or two-thirds of the way down) when fully expanded; stamens diverging on all sides;" e.g., Canadense, Carnolicum, Chalcedonicum, Columbianum, Hansoni, Humboldti, Leichtlini, Martagon, Monadelphum (*Szovitzianum Colchicum*), Pardalinum, Pomponium, Pyrenaicum, Superbum, Tenuifolium, and Testaceum (*Excelsum*), the only Hybrid Lily yet in commerce. From this group a succession of flowers is maintained from May to September.

1315 " " 12 in 12 "	12s.; £1 5s.; £2 2s.

[Amaryllis, Lilium.]

LILIUM—continued.

	SELECTIONS—continued.	
1316 For Flower border decoration	50 in 50 beautiful varieties	£3 3s.; £4 4s.; £5 5s.; £7 7s.
1317 " "	25 in 25 "	£1 1s.; £1 10s.; £2 2s.; £3 3s.
1318 " "	12 in 12 "	7s. 6d., 10s. 6d., 15s., 21s. to 42s.
1319 For Rhododendron beds	25 in 25 beautiful varieties	30s., 42s. to 63s.
1320 " "	12 in 12 "	15s., 21s. to 42s.
1321 †Auratum, the Golden-rayed Hill Lily of Japan, the Queen of Lilies, perfectly hardy; roots in December, from Japan;	these are preferable to European-grown roots,	each s. d.
1322 *Bulbiferum umbellatum, crimson-scarlet, shading to yellow, freely spotted, 2½ ft.	per doz., 9s., 12s., 18s., & 24s.; each, 1s., 1s. 6d., 2s. &	2 6
1323 †Canadense, mixed (Parkinson's Martagon Imperiale), 3 ft.	per doz. 15/-	1 6
1324 " flavidum, yellow, spotted crimson, 3 ft.	2 6
1325 " rubrum, red, spotted, 3 ft.	2 6
1326 *Candidum, snow-white, 4 ft. (The White Lily of cottage gardens)	per 100, 21/-, per doz., 3/6	0 4
1327 " fol. aureo-marginatis, leaves elegantly gold-margined	3 6
1328 " speciosum, small snow-white flowers, 4 ft.	per doz., 7/6 0 9
1329 *Carniolicum, orange, passing to scarlet, 3 ft.	1 6
1330 †Catesbaei, bright orange, spotted purple, 1 ft.	2 6
1331 *Chalcedonicum, intense deep scarlet, 3 ft. (The Scarlet Turk's Cap Lily of cottage gardens)	1 6
1332 *Columbianum, yellow, a miniature form of Humboldti, 1½ ft.	3 6, 5/6, &
1333 *Concolor, fiery scarlet, 1 ft.	2 6
1334 *Coridion, bright yellow, 1 ft.	2 6
1335 *Cordifolium giganteum, white, the most majestic of Lilies, 6 to 10 ft. Figured in "The Garden," 1875	5/6, 7/6, 10/6 &	15 0
1336 *Croceum, orange, freely spotted with black. (The Orange Lily of cottage gardens) 3 ft. per doz., 3/6	0 4	
1337 *Davuricum erectum, rich cerise-scarlet, shading to yellow, 2½ ft.	5/6	0 6
1338 * " incomparabile, intense rich crimson, freely-spotted, 2 ft.	7/6 0 9
1339 " Sappho, scarlet, shading to orange, moderately spotted, 2 ft.	7/6 0 9
1340 " fine mixed varieties	per 100, 30/-, 4/-	0 6
1341 *Hansoni, bright golden-yellow, freely spotted crimson, rare and beautiful, 3 ft. Figured in "The Garden," 1880	10 6
1342 *Humboldti, rich golden-yellow, freely spotted crimson, flowers of great substance, 5 ft. Figured in "The Garden," December, 1881	3/6 & 5	6
1343 " oscillatum, golden-yellow, spotted purple and stained brown-crimson, 3 ft.	3/6 & 5	6
1344 *Japonicum Browni, white, exterior tinged brown, a magnificent species, 2 ft.	3/6 & 5	6
1345 " Krameri, white shading to rose-pink, 2 ft. Figured in "The Garden," 1876	3/6 & 5	6
1346 *Leichtlini, golden-yellow, spotted crimson, 3 ft. Figured in "The Garden," 1882.	5/6	0 6
1347 *Longiflorum, pure white, 1½ ft.	per 100 30/-, 4/-
1348 " eximium, pure white, very long flowers, 2 ft.	1 6
1349 " Liu Kiu, pure white, 1½ ft.	1 6
1350 " Takesimæ, pure white, very large flowers, 2 ft.	1 6
1351 " Wilsoni, pure white, very long flowers	2 6
Elegans, see Thunbergianum.		
1352 *Martagon, purple, 4 ft.	per doz. 7/6
1353 " album, pure white, a very handsome scarce lily, 4 ft.	3 6
1354 " Dalmaticum, rich glossy crimson-purple, a magnificent species, 4 ft.	3 6
1355 " flore pleno, purple, very double, 4 ft.	2 6
1356 *Monadelphum Svoritzianum (Colchicum), fine citron-yellow, spotted black, 3 ft. Figured in "The Garden," 1876	2/6 & 3	6
1357 *Neligheriense, pure white, long flower	7/6 & 10
1358 †Pardalinum scarlet, shading to rich yellow, freely spotted purple-brown, 5 to 6 ft. Figured in "The Garden," 1881	2/6 & 3
1359 † " californicum, intense crimson, shading to orange, and spotted, 3 ft.	3/6 & 5	6
1360 † " var. Bourgæi, crimson-scarlet, shading to yellow, spotted crimson with narrow foliage, in regular whorls, and flowers the largest of the section, 5 ft.	3 6
1361 † " var. Michauxii, crimson-scarlet, shading to yellow, spotted purple-brown, 4 to 5 ft.	3 6
1362 " Pallidifolium, rose-scarlet, shading to orange, and spotted	2/6 & 3
1363 †Parryi, rich golden-yellow, very fragrant. Figured in "The Garden," 1880.	5/6	0 6
1364 †Parvum, orange, interior yellow, freely spotted, a miniature form of Canadense, 3 ft.	2 6
1365 †Philadelphicum, bright scarlet, shading to orange, and spotted crimson-black, 1 ft.	2 6
1366 *Pepponium, bright crimson-scarlet, an elegant species resembling Tenuifolium, but more robust, 2 ft. Figured in "The Garden," 1881	per doz. 15/-
1367 *Pulchellum, brilliant scarlet	3 6
1368 *Pyrenaeum flavum, yellow, spotted black, 3 ft.	per doz. 7/6
1369 " rubrum, orange-red, 3 ft.	10/6
1370 †Rubescens, white, changing to delicate rose, and dying off purple, freely-spotted black. Figured in "The Garden," 1881	1 0

SECTION I.—SPECIOSUM RUBRUM AND ITS VARIETIES.

		each—s. d.
1371 *Speciosum album, pure white, 3 ft.	per doz., 10/6 & 15/-; 1/- &	1 0
1372 " fasciatum, pure white, 3 ft.	1 6
1373 " rubrum, white, suffused and spotted crimson, 3 ft.	per doz. 7/6
1374 " verum (typical Speciosum), white, suffused and spotted crimson, having a clearly defined white edge to the segments of the perianth, 3 ft.	0 9
1375 " macranthum, white, spotted crimson, very large, 3 ft.	1 6
1376 " purpuratum, rich blood-crimson, edged pure white, the finest, 3 ft.	2 6
		3 6

SECTION II.—SPECIOSUM ROSEUM AND ITS VARIETIES.

1377 *Speciosum album Kraetzeri, pure clear white, very beautiful, 3 ft.	3 6
1378 " punctatum, white, spotted delicate pink, anthers yellow, a distinct species, 3 ft.	2 6
1379 " roseum, white, suffused and spotted rose, 3 ft.	per doz. 7/6
1380 " verum, white, suffused and spotted rose, green stem, 3 ft.	0 9
1381 " fasciatum, white, suffused and spotted rose, very floriferous, 3 ft.	2 6
Lilium.]	[Barr and Son,	

LILIUM—continued.

		each—s. d.
1382 *	Speciosum roseum multiflorum, white, suffused and spotted rose, very beautiful, 3 ft., per doz., 10/6	1 0
1383 *	" fine mixed, from Roseum and Rubrum, for beds and borders, per 100, 40/-	5/6
1384 †superbum, varying in shade from orange to crimson, spotted rich brown, 4 to 7 ft.	10/6	1 0
1385 *Testaceum, syn. excelsum, delicate apricot, delightfully fragrant, 4 ft.	per doz., 15/-	1 6
1386 †Tenuifolium, rich scarlet, 2 ft.		2 6
1387 *Tigrinum sinense, rich orange-scarlet, freely spotted crimson-brown, 3 ft.; per 100, 21/-	3/6	0 4
1388 * " Fortunei, rich orange-scarlet, spotted crimson, 4 ft.	5/6	0 6
1389 * " flore pleno, rich orange-scarlet, very double, 4 ft.	10/6	1 0
1390 * " splendens, bright orange-scarlet, covered with large crimson spots, 6 ft.	10/6	1 0
1391 *Thomsonianum, or Fritillaria Thompsoniana, bright rose-lilac. Figured in "The Garden," 1877	1	6
1392 *Thunbergianum alutaceum, glowing apricot, freely spotted black, 1 ft.	per doz., 7/6	0 9
1393 * " Prince of Orange, clear apricot-orange, spotted black, 1 ft.	1	6
1394 * " armeniacum, soft rich glowing orange-red, 1½ ft.	per doz., 7/6	0 9
1395 * " atrosanguineum, rich blood-crimson, spotted black, 1½ ft.	per doz., 10/6	1 0
1396 * " Batemanæ, soft rich glowing orange-red, very handsome, 3 ft. Figured in "The Garden," 1879	5/6
1397 * " bicolor, apricot-orange, flamed scarlet and lilac, very beautiful, 1½ ft., per doz., 10/6	2 6	
1398 * " flore pleno (staminosum), blood-crimson, perfectly double, 1½ ft.	1	6
1399 * " fulgens, rich crimson, stained tawny yellow, 1½ ft.	per doz., 7/6	0 9
1400 * " sanguineum, crimson, shaded tawny yellow, flowers large, 1½ ft.	per doz., 7/6	0 9
1401 * " Van Houttei, blood-crimson, blotched gold, very handsome, 1½ ft.	2 6	
1402 * " Wallacæ, rich glowing orange-red, with black spots, 2½ ft.	per doz., 21/-	2 6
1403 * " fine mixed varieties	per 100, 42/-, per doz., 7/6
1404 *Wallichianum. The flowers of this magnificent Lily are 9 to 12 inches long, of great substance, and deliciously fragrant. Figured in "The Garden," 1876	7/6 & 10	6
1405 *Washingtonianum, white, shading to lilac, handsome, 3 ft. Figured in "The Garden," 1881	5/6, 7/6, & 10	6

The following is a List of popular names which have been given to the Lily, and of Plants popularly called Lilies.—

African Lily	<i>Agapanthus</i> .	Lily Hyacinth	<i>Scilla Lilio-hyacinthus</i> .
Atamasco	" <i>Zephyranthes atamasco</i> .	Lent Lily	<i>Native Narcissus</i> (<i>pseudo-Narcissus</i>).
Belladonna	" <i>Amaryllis Belladonna</i> .	Lily of the Field	<i>Amaryllis lutea</i> .
Black	" <i>Lilium kimschaticum</i> .	Lily of the Nile	<i>Calla ethiopica</i> .
Bourbon	" <i>Lilium candidum</i> .	Lily of the Valley	<i>Convallaria majalis</i> .
Brown's	" <i>Lilium Japonicum Browni</i> .	Lily Pink	<i>Aphyllanthes monspeliensis</i> .
Canadian	" <i>Lilium canadense</i> .	Parry's Lily	<i>Lilium Parryi</i> .
Corfu	" <i>Funkia subcordata</i> .	Persian "	<i>Fritillaria persiea</i> .
Cuban	" <i>Scilla peruviana</i> .	Plantain "	[num.]
Day	" <i>Hemerocallis</i> .	Robinson's "	<i>Lilium pardalinum Robinsoniae</i> .
Fire	" <i>Lilium davuricum</i> .	Scarborough "	<i>Vallota purpurea</i> .
Flax	" <i>Phormium tenax</i> .	Silver "	<i>Lilium Washingtonianum</i> .
Florida	" <i>Zephyranthes Treatii</i> .	St. Bruno's "	<i>Authericum liliastrum</i> .
Fortune's	" <i>Lilium Tigrinum Fortunei</i> .	St. Bernard's "	<i>Anthericum liliago</i> .
Guernsey	" <i>Nerine sarniensis</i> .	Swamp "	<i>Zephyranthes</i> .
Giant	" <i>Lilium giganteum</i> .	Thunberg's "	<i>Lilium Thunbergianum (elegans)</i> .
Hanson's	" <i>Lilium Hansoni</i> .	Turk's Cap "	<i>Lilium martagon</i> .
Humboldt's	" <i>Lilium Humboldti</i> .	Wallace's "	<i>Thunbergianum Wallacei</i> .
Jacobaea	" <i>Sprekelia formosissima</i> (<i>Amaryllis formosissima</i>).	Water "	<i>Nymphaea</i> and <i>Nuphar</i> .
Leichtlin's	" <i>Lilium Leichtlini</i>	Washington's "	<i>Lilium Washingtonianum</i> .

CYPRIPEDIUM CALCEOLUS MAJOR (*The large Alpine Lady's Slipper*).

Prepared Strong Crowns, for pot culture under glass, each 1s. 6d. ; 6 crowns, 6s. ; 12 crowns, 10s. 6d. ; 25 crowns, 17s. 6d. ; 50 crowns, 30s.

This splendid hardy Orchid is of the simplest possible culture, and should be grown by all who take an interest in the cultivation of beautiful flowers whether in or out of doors; grown under glass, several crowns should be planted together in a pot, pan, or box, using a moist peaty soil, and then placed in an orchid house or stove, or the plants may be grown in a cool greenhouse, where they can be had in bloom about February. Out of doors, plant in moist peat. The slipper or labellum of the flower is a beautiful clear yellow; the sepals, which are four in number, are of a soft hazel-brown, and the flowers are frequently 4 inches across.

From the "Gardeners' Chronicle," July 8th.

" HARDY FLOWERS.—No such varied and enormous collection of hardy flowers has been before exhibited at any one time as was so effectively arranged by MESSRS. BARR & SON in the conservatory at South Kensington on Tuesday last; the effort was indeed gigantic, and presented striking evidence of the immense resources in the floral way which this firm have at their disposal. Covering the whole of a table seventy feet in length and some six feet in width, and overflowing on to the floor on the opposite side in many groups, the collection presented features of singular interest, and strove hard to attract some of that admiration which visitors had come to bestow so lavishly on the Roses. Of Lilies there were very fine kinds, white, pink, rose, scarlet, and many coloured Clove Carnations; white and red Spiræas, the beautiful Alstroemeria aurea, the yellow Arum Richardia hastata; the singularly beautiful Calochortus venustus, Cionothera speciosa and Fraseri. The elegant blue Thistle, Eryngium amethystinum, Coreopsis lanceolata; Millas (Triteleias) Bloomeria aurea; Ixias in great variety. Many kinds of hardy Gladioli, of the ramosus section, singularly beautiful; these Gladioli force well, and are extremely effective in pots, and it is marvellous they are not universally grown. Then there were Peonies, Pyrethrums, giant Thrifts, bunches of the lovely yellow Sweet Sultan, and blue varieties of the Centaureas, Orchis maculata, Lythrum roseum superbum, Sweet Peas in variety, and, indeed, hardy flowers innumerable. The group was effectively dressed with Ferns and other plants, in pots, and constituted quite an exhibition in itself."

ALPHABETICAL LIST OF BULBS, TUBERS, AND PLANTS,
NOT ENUMERATED IN THE FIRST PORTION OF THE CATALOGUE, viz., from pages 3 to 31,
WITH
REFERENCES TO THE FAMILIES NOT DETAILED UNDER THIS HEADING.

Those marked thus * will be ready to send out after the middle of October. Orders which embrace those late ripening bulbs, etc., will be executed in two parts, carrying forward those not ready for delivery till they are safe to remove.

each—s. d.

1406 * <i>Abobra viridiflora</i> , an elegant hardy summer climber with miniature scarlet fruits	1	6
1407 * <i>Acanthus mollis</i> , a handsome hardy plant. The leaves are supposed to have furnished the idea for the capital of the Corinthian pillars	1	0
1408 * " <i>lusitanicus</i> , a species of fine effect	1	0
1409 * " <i>spinosisimus</i> , very remarkable for its handsome spiny leaves	1	0
1410 <i>Achimenes</i> , 25 in 25 beautiful varieties, 1 root each, 10s. 6d.		
1411 " 12 in 12 beautiful varieties, 3 roots each, 12s. 6d.		
1412 " 12 in 12 beautiful varieties, 1 root each, 4s. 6d.		
<i>Achimeus</i> are charming hot-house plants, very effective grown in pots, pans, and hanging baskets.		
1413 * <i>Aconitum</i> (Monkshood), several handsome named varieties, quite hardy, 3 ft.....	6d.	10
1414 * <i>Adonis vernalis</i> , a beautiful spring flowering hardy plant, with large star-shaped clear yellow flowers, quite hardy, 3 ft.....	per doz.	5s. 6d.
1415 * <i>Agapanthus umbellatus</i> (the Blue African Lily), flowers in handsome umbels, half hardy	1	0
1416 * " <i>albus</i> (the White African Lily), flowers in handsome umbels, half-hardy	1	0
1417 * " <i>fol. variegatis</i> (the African Lily), with silver-margined foliage	2	6
1418 <i>Allium acuminatum</i> , a beautiful hardy species with bright rose flowers in umbels, 1 ft., per doz. 7s. 6d.	0	9
1419 " <i>aureum</i> (Moly), bright yellow, flowers in umbels.....	1 ft.	15. 6d.
1420 " <i>azureum</i> , handsome intense blue flowers, quite hardy.....	per doz.	5s. 6d.
1421 " <i>descendens</i> , large dark red-purple, flower heads in compact umbels, 2 ft.	"	4s. 6d.
1422 " <i>Neapolitanum</i> , white flowers, much used in bouquets.....	"	3s. 6d.
1423 " <i>pulchellum</i> , flowers crimson-scarlet, a very distinct species, 1½ ft.	1	6
1424 " <i>roseum</i> , most pleasing, rosy puce colour.....	per doz.	3s. 6d.
1425 " <i>triquetrum</i> , flowers white, striped green, 1 ft.	"	4s. 6d.
All the Alliums are hardy and very showy.		
1426 * <i>Alstroemeria aurea</i> , orange flowers, spotted carmine	6s.
1427 * " <i>peregrina alba</i> , white, very beautiful flowers		3
1428 * " <i>rosea</i> , rose-coloured flowers, beautifully spotted		2
1429 * " <i>psittacina</i> , (Parrot-flowered), bright crimson flowers distinctly splashed with green and mahogany, 3 ft.....	per doz.	4s. 6d.
1430 * " in fine mixture.....	"	4s. 6d.
These beautiful plants are perfectly hardy, very easy to cultivate, and most valuable to cut for vases. Plant at a depth of one foot, and by preference close to a wall.		
Amaryllis, see p. 28.		
1431 * <i>Amorphophallus Rivieri</i> (Umbrella arum), very curious and handsome plant, with large palmate leaves, 2 to 3 feet in diameter, and white spotted stems; plant in April		1
Anemone, see p. 24.		
1432 * <i>Anomatheca cruenta</i> , a charming dwarf plant, with small bright scarlet crimson-blotted flowers, for edging and pot culture; out of doors plant in Spring	per doz.	1s. 6d.
1433 * <i>Anthericum liliastrum</i> (St. Bruno Lily), torch pure white, Lily-like flowers, quite hardy, 1 ft.	0	3
1434 * " <i>major</i> , large pure white flower, a valuable hardy plant, 2 ft. Figured in "The Garden," 1826	1	0
1435 * " <i>Lilago</i> (St. Bernard's Lily), beautiful pure white starry flowers, hardy, 1½ ft	1	6
1436 <i>Antholyza</i> , 1 each 6 named varieties, culture same as for Early Gladiolus	0	9
1437 " mixed varieties, culture same as for Early Gladiolus	2	6
The long Gladiolus-like flower-spikes of the Antholyza make a nice variation in the flower-border.		
1438 * <i>Aplos tuberosa</i> , a vigorous hardy deciduous climber, with orange scarlet flowers and elegant foliage	per doz.	5s. 6d.
1439 <i>Arum cornutum</i> , red flowers, spotted black, stem curiously marbled	0	6
1440 " <i>crinitum</i> , dark red, immense flower, marbled stem	0	6
1441 " <i>Dracunculus</i> , purple-red and black blue flower, marbled stem	0	9
1442 " <i>italicum</i> , greenish white, strikingly variegated leaves	0	6
With the exception of Crinitum, which is half-hardy, the Arums are uninjured by the severest weather. The brilliant scarlet fruits of these plants are very attractive in autumn.		
1443 * <i>Asclepias tuberosa</i> , fine orange flowers, quite hardy, 3 ft.	per doz.	4s. 6d.
1444 " <i>incarnata</i> , purple-rose, vanilla-scented, quite hardy, 3 ft.	0	9
1445 * <i>Asphodelus luteus</i> , fine border plant, perfectly hardy, 3 ft.	0	9
1446 * " <i>ramosus</i> (King's Spear), white, a fine plant, perfectly hardy, 3 ft.	1	0
1447 * <i>Auriculas</i> , fine hardy border varieties	per doz.	7s. 6d.
1448 " named alpine varieties	per doz.	21s. to 42s.; each, 2s. 6d. to 5
1449 " stage varieties.....	per doz.	42s. to 63s.; each, 3s. 6d. to 7
Babianas, see p. 23.		
1450 * <i>Begonias</i> , new large-flowered seedlings, for bedding or for indoor decoration, in 8 distinct colours: Crimson, orange, red, magenta, yellow, scarlet, pink, and primrose, each 1s., or the 8 sorts for 7s.; per doz., 9s.; per 100, 6s.		
These beautiful new bedding Begonias are more hardy than the Scarlet Geranium, and remain longer decorative. They require the same winter treatment as the Dahlia, and, like this plant, should be started into growth in Spring and potted out in June.		
1451 * <i>Begonias</i> , 6 in 6 named beautiful varieties, 7s. 6d., 10s. 6d., 15s. & 21s.		
1452 * " 12 in 12 named beautiful varieties, 15s., 21s., 30s. & 42s.		
1453 * " choice mixed varieties	per doz.	10s. 6d. to 15s. 1

		each—s. d.
1454	* <i>Bletia Hyacinthina</i> , a beautiful (almost, if not quite hardy) orchid of easy culture, having beautiful violet and white flowers. The Chinese grow this plant for its grateful perfume, 1 ft. Figured in "The Garden," 1879.....	2 6
1455	<i>Bloomeria aurea</i> , beautiful golden flowers in umbels, quite hardy, 1 ft.per doz. 5s. 6d.	0 6
1456	<i>Bobartia aurantiaca</i> , flowers brilliant salmon-rose, valuable for light soils and rockwork, hardy 1 ft., per doz. 2s. 6d.	0 3
1457	* <i>Bomarea Caldasiana</i> , flowers orange-searlet, with yellow crimson spotted, figured in "The Garden," August 6th, 1881	15 0
1458	" <i>Carderi</i> , a magnificent species, flowering in large clusters of lilac and rosy white	15 0
1459	" <i>oculata</i> , very beautiful climbing species, with six or eight red purple-spotted flowers in a cluster, half-hardy..... The Bomareas are magnificent greenhouse plants, and do best in a compost of equal parts rough sand, turf, loam, and peat. When growing manure-water should occasionally be given.	15 0
1460	* <i>Boussingaultia loxothylloides</i> , an elegant climber and valuable for hanging baskets, leaves pale green and silvery, hardy on dry rockwork	per doz. 4s. 6d.
1461	* <i>Bravoa geminiflora</i> , flowers in long racemes of orange-searlet resembling <i>Chelone barbata</i> ; a good plant indoors, and hardy in the flower border, 1½ ft.per doz. 5s. 6d.	0 6
1462	<i>Erodium coccineum</i> (the Vegetable Fire Cracker of California), flowers magenta, tipped pea-green, a most remarkable flower, 1½ ft. Figured in "The Garden," 1876	1 6
1463	" <i>congesta</i> , lilac, flowers in rosettes on tall stems, valuable as a cut flower, quite hardy, Figured in "The Garden," 1881	2 ft., per doz. 1s. 6d.
1464	" <i>grandiflora</i> , flowers bright blue, a charming dwarf plant, quite hardy, ½ ft., per doz. 1s. 6d.	0 3
1464½	" <i>terrestris</i> , pale violet flowers, almost resting on the soil	1 0
1465	* <i>Brunsvigia coranica</i> , flowers delicate rose, powerfully orange-scented, 3 ft.	5 6
1466	" <i>Josephina</i> , flowers orange-searlet, with 50 to 60 flowers on an umbel, 3 ft.	12 6
1467	" <i>multiflora</i> , large umbel of red flowers, 3 ft.	7 6
	The Brunsvigia, or Giant Amaryllis, requires warm house treatment; on stout stems they produce umbels of a large size, crowded with large flowers. Josephine has an umbel of about 3 feet in diameter.	
1468	<i>Bulbocodium vernum</i> , early in Spring, and preceding the foliage, this fine bulb produces a mass of rose-purple flowers close to the ground, valuable as an edging and for rockwork, perfectly hardy, ½ ft., per 100, 10s. 6d.; per doz. 1s. 6d.	0 3
1469	* <i>Bupleurum toxicaria major</i> , orange-red, 1 ft.	15 0
1470	" <i>minor</i> , pink, ½ ft.	12 0
	The Bupleures are closely allied to the Brunsvigias, and require the same treatment; their fine pink and orange-searlet flowers are produced in great umbels.	
1471	* <i>Caladium</i> , 12 in 12 named beautiful varieties	21s., 30s., & 42s.
1472	" 6 in 6	12s., 15s., & 21s.
	Caladiums are perhaps the most beautiful and picturesque of foliage stove plants.	
1473	* <i>Calla Æthiopica</i> , large white flowers	per doz. 7s. 6d., 10s. 6d., & 18s.; 9d., 1s. &
1474	" <i>albo-maculata</i> , foliage beautifully spotted white	1 6
1475	" <i>Hastata</i> , fine yellow flowers, with black centre and white spotted leaves	1 6
1476	" <i>melanoleuca</i> , fine primrose flowers, with black centre	1 6
	The Callas are all greenhouse plants. Æthiopica is the Lily of the Nile, and one of the very useful plants which is extensively grown for Covent Garden Market. Albo-maculata is much prized for its beautifully-spotted foliage; Hastata for its fine yellow flowers. See figure in "The Garden," 1880.

		per 100, 10s. 6d.; per doz., 1s. 6d. 0 3
	The great Crocus-like flowers of the Colchicum, or Autumn Meadow-Saffron, carpet the ground in September and October with colours ranging from pure white to the intense crimson-magenta of Speciosum rubrum, which was figured in "The Garden" of 30th June, 1877. All the Colchicum flowers are more or less chequered; Parkinsoni and Variegata are the most conspicuously and elegantly chequered. The foliage appears in Spring, and is almost as varied as the flowers; some have large massive leaves, others small and frill-like; a grand bulb to naturalize in grass.	
1519	*Commelinia tuberosa, a fine border plant, blossoms of the richest blue, with continuous succession of flowers during Summer and Autumn; plant in Spring, 1½ ft....per doz., 3s. 0 4

1539	" Sulphurine, sulphur colour, 3 ft.	" 7s. 6d. 0 9
1540	" Mixed, various shades, 3 ft.	" 5s. 6d. 0 6
	The Crown Imperial (<i>Fritillaria Imperialis</i>) is a stately hardy border plant, effective in Spring, its tall stem terminating in a cluster of pendant bell-shaped flowers, surmounted by a tuft of fresh green leaves.	
1541	Cunningia trimaculata, an exquisite greenhouse bulb, with beautiful blue flowers, spotted black, ¾ ft. 5 6	
1542	*Cyanella cerulea (capensis), rich blue, dwarf, branching, 1 ft.	1 6
1543	" lutea, fine yellow, 1 ft.	1 6
	The elegant Ixia-like flowers of Cyanella are disposed in a spreading panicle, and last a long time; a fine greenhouse bulb.	
	Cyclamen, see p. 25.	
1544	Cyclobothra alba, white, 1 ft.	These are called the Star Tulips of California, per doz., 9s. 1 0
1545	" cerulea, light blue, 1 ft.	and are remarkable flowers, both as regards shape and exquisite beauty. The bulbs are quite hardy; but, like the Calochortus, should be lifted when done flowering, kept dry, and be planted late in Autumn. 15s. 1 6
1546	" lutea, yellow, 1 ft.	" 4s. 6d. 0 6
1547	" pulchella, golden-yellow, 1 ft.	" 2 0
1548	" rubra, rose-white, 1 ft.	" 1 0
1549	*Cypella Herbertii, an elegant hardy plant, with small Tigridia-like blossoms of yell w. striped red and spotted black; lift the bulbs, and replant in Spring, 1½ ft.	per doz., 2s. 6d. 0 3
1550	Cyphia volubilis, a beautiful greenhouse climbing bulb, with pale blue flowers, 1 ft.	1 0
1551	*Cyrtanthus collinus, crimson, ¾ ft.	These are remarkable for their pendulous blossoms, the stout stem of Obliquus is surmounted by a large whorl of long flowers. 7 6
1552	" obliquus, orange, tipped green, 1½ ft.	7 6
1553	" odorus, crimson, ¾ ft.	7 6

		each s. d.	
1554	Cypripedium calceolus (Alpine Lady's Slipper), yellow and purple, 1½ ft.	1 6	
1555	" guttatum, white, spotted purple, ¾ ft.	5 6	
1556	" macranthum, flowers crimson, richly mottled, very large, 1 ft. Figured in "The Garden," 1877	25. 6d. & 3 6	
1557	" pubescens, yellow and purple, very pretty, 1 ft.	3 6	
1558	" spectabile (Moccasin Flower), pure white, and rosy crimson, 1½ ft. Figured in "The Garden," 1877	2 6	
These Cypripediums are hardy bog plants of exquisite beauty, and their culture in and out of doors cannot be too highly recommended.			
Daffodils, see p. 9.			
1559	*Dahlias, double, choicest named varieties	pot grown dry roots, per doz., 9s. & 12s.	
1560	" single, named varieties	pot grown dry roots, per doz., 12s., 18s., 25s., & 30s.	
Day Lily, see Hemerocallis.			
1561	Delphinium cardinale, the large scarlet Larkspur, 2 ft.	1 6	
1562	" nudicaule, the dwarf scarlet Larkspur, very attractive, easily grown in pots or flower borders, 1½ ft.	1 0	
1563	" 50 in 50 most beautiful varieties	per doz. 9s. to 84s.	
1564	" 25 in 25 "	30s. to 42s.	
1565	" 12 in 12 "	12s., 18s., and 25s.	
The Delphiniums, or Perennial Larkspurs, offered in the above collections, are a valuable class of hardy plants, varying in height from 2 to 6 feet, and in colour ranging from pure white, pale lavender, and azure, to deep indigo blue, whilst some almost black, frequently with white, brown, or black centres; the flowers differing considerably in form and size; there are singles, semi-doubles, and doubles, with spikes of bloom varying from 1 to 3 feet in length. When planted in flower borders and shrubberies, and there allowed to grow into large specimens, they surpass, in effect, all other herbaceous plants.			
1566	*Dianthus (the Carnation), Choice Named Robust Varieties, for out-door culture, sold in pairs	per dozen plants, 10s. 6d. to 15s.	
1567	" "	Clove-Scented Varieties, sold in pairs, per dozen plants, 10s. Ed. to 15s.

1569	*" (the Picotee), Choice Named Varieties, sold in pairs	per dozen plants, 10s. 6d. to 15s.	
1570	" (the Pink), "	per dozen plants, 9s. to 12s.	
Dileya, see p. 17.			
1571	*Disa grandiflora (the Flower of the Gods), the most beautiful of all hardy terrestrial Orchids. The lateral sepals rich scarlet-crimson, the dorsal ones blush, delicately veined crimson; a splendid hardy bog plant, 1 ft.	7 6	
1572	*Dodecatheon integrifolium, deep crimson, 1 ft.	1 6	
1573	" Jeffreyanum, rose-purple, 1½ ft.	3 6	
1574	" meadla, lilac, 1 ft. } The American Cowslip, or Shooting Star, neat May and June-	0 6	
1575	" alba, white, 1 ft. }	1 6	
1576	" elegans, rose and lilac, 1 ft. }	1 6	
flowering border plants, with beautiful Cyclamen-like flowers, succeed best in a moist peaty soil and shady situation.			
Dog's-Tooth Violets, see Erythronium.			
1577	*Epimediums, 6 fine named varieties, 1 ft.	6 0	
1578	" 3 "	The Epimediums are elegant hardy plants, the flowers rivalling the small and rare Orchids in their fantastic beauty, while the leaves, in their young state, have a lovely pink tinge. A valuable rock plant, and most desirable to force early under glass.	3 6
1579	*Eremurus robustus, a magnificent hardy plant, from Central Asia with long spikes of rosy flowers, 3 ft.	7 6	
1580	*Erythrina (the Coral Flower), 6 in 6 splendid named varieties, 3 ft.	7 6	
The Erythrina is a magnificent plant in summer, having a handsome foliage, and crowded with large coral red flowers. If grown in pots, cut down in autumn, and place under the stage; if grown out of doors, plant close to a wall, or in front of a greenhouse, taking care that the drainage is perfect, and in winter give a thick covering of ashes.			
1581	Erythronium Dens-canis, purple, ¾ ft.	per 100, 7s. 6d.; per doz. 1s. 6d.	
1582	" " purpureum major, purple, large-flowered, ¾ ft.	" 3s. 6d.	
1583	" " roseum, rose, ¾ ft.	" 2s. 6d.	
1584	" " major, rose, large-flowered, ¾ ft.	" 3s. 6d.	
1585	" " album, white, ¾ ft.	per 100, 15s.; " 2s. 6d.	
1586	" " major, white, large-flowered, ¾ ft.	" 3s. 6d.	
1587	" " mixed, fine, ¾ ft.	per 100, 10s. 6d.; " 1s. 6d.	
1588	" " large-flowered, ¾ ft.	per 100, 15s.; " 2s. 6d.	
1589	" Americanum, bright yellow, ¾ ft. G. F. Wilson, Esq., informs us that, in a damp shady part of his wood, amongst the grass and decomposed leaves, this beautiful species flowers annually, planted at a depth of 3 inches, and he has counted as many as thirty-six blossoms out at one time.	0 2	
1590	" giganteum, creamy white flowers, 6 to 12 on a spike, 1 ft.	per doz., 7s. 6d. & 1s. 6d.	
1591	" roseum, beautiful rose flowers, 1 ft.	2 6	
In spring on no prettier sight can the eye rest than a mass or edging of the beautifully variegated foliage of the Dog's-tooth Violets. Few of the prized <i>Anæctochilus</i> of India can equal these in the variegation of their leaves, and when the graceful Cyclamen-like flowers appear, ranging in colour from the deepest purple to the purest white, the effect becomes matchless. Americanum is remarkable for its rich yellow blossoms, and Giganteum for its large handsome flowers; all quite hardy.			
1592	Eucharis Amazonica. The beautiful snow-white flowers of this handsome stove-plant are deliciously fragrant, and prized for bouquets and for ladies' hair and dresses, 1½ ft.	pots of established roots, 3s. 6d., 5s. 6d., 7s. 6d., & 10 6	
1593	*Eucomis punctata, white, 1½ ft. } These are remarkable hardy border plants, with long spikes {	1 0	
1594	" regia, white, 1½ ft. }	1. 0	
1595	Freesia Leichtlini, creamy white, 1 ft.	per doz. 3s. 6d.	
1596	" refracta alba, pure white, 1 ft.	10s. 6d.	
An excellent Coloured Plate and a splendid article on Freesias appeared in "The Garden," July 29. The writer of the article has Freesias in flower from Christmas by starting in succession. King Street, Covent Garden, 1882.]			

The fragrance of these charming flowers is most agreeable, and their lasting qualities wonderful. We have known a spike of *Refracta alba* last three weeks in water, and during the whole time diffusing fragrance.

Fritillaria Imperialis, see Crown Imperials.

		each - s. d.
1598 "	Kamschatica (the Black Lily), 3 ft.	2 6
1599 "	melsagris, ross-chequered, 1 ft. per doz. 4s. 6d. o 6	o 6
1600 "	dsrk-chsquared, 1 ft. " 2s. 6d. o 3	o 3
1601 "	white, 1 ft. " 4s. 6d. o 6	o 6
1602 "	mixsd varisties, 1 ft. per 100, 10s 6d.; " 1s. 6d. o 3	o 3

1618 *Gesneria, 12 in 12 varieties, 2s. to 3s.	2s. 6d. & 3 6	3 6	
1619 *	6 in 6 varieties, 12s. to 15s.		

These beautiful hothouse plants cannot be too highly recommended for flower and foliage.

Gladiolus, see p. 27.

1620	*Gloxinia, 12 in 12 varieties	18s., 24s., to 30s. 2 6
1621 *	6 in 6 varieties....	10s. 6d., 12s., to 15s. 2 6
	The flowers of <i>Gloxinia</i> surpass all others for delicate rich hues; a valuable warm-house plant.	
1622	Greenhouse Plants, assorted	per doz. 24s., 30s., & 42s. 3 6
	Guernsey Lillies, see p. 28.	
1623 *	Habranthus Andersoni, gold and brown, 1 ft.	per doz. 7s. 6d. o 9
1624 *	coccineus, purple-red, autumn-flowering, 1 ft.	" 18s. 2 0
1625 *	prætensis, scarlet, 1 ft. Figured in "The Garden," 1878	" 25s. 2 6
1626 *	rossii, rose-lilac, ½ ft.	" 25s. 2 6

The *Habranthus* is closely allied to the *Amaryllis*, and the flowers are of rare beauty. *Prætensis* was figured in "The Garden," 1878, from plants flowered in the open border, by the Rev. John Nelson, Aldborough Rectory. Plant close to a wall, or in front of a greenhouse, at a depth of 9 inches, taking care the drainage is good, or grow in pots in the greenhouse.

1627	*Hæmanthus albiflos, white, 1 ft.	2 6
1628 *	coccineus, scarlet, 1 ft.	2 6
1629 *	" Katharinus, var. Alice Barr, very large flower heads of brilliant orange-scarlet, new and magnificent, 2 ft.	63 0
1630 *	pubescens, white, 1 ft.	2 6
1631 *	puniceus, orange-scarlet, 1 ft.	3 6
1632 *	trigrinus, deep scarlet, 1 ft.	2 6

It would not be possible to overrate the grandeur of this noble genus, whether grown in the greenhouse or stove, their large brilliant coloured flower heads are the first to catch the eye amongst a collection of plants, however rich and varied the surrounding specimens. Place a blooming plant of the glowing *Masdevallia ignea*, or *M. Veitchii*, side by side with *Hæmanthus puniceus*, and ask an observer which is the brightest, freshest, or most effective.

1633	*Hedychium Gardnerianum, yellow, fragrant, 5 ft.	1 6
1634 *	" coronarium, yellow, 5 ft.	1 6
1635 *	" pallidum, light yellow, 5 ft.	1 6

The *Hedychium* richly deserves a place in every collection of plants, the fragrant flowers make the atmosphere of the plant house exceedingly pleasant. Amongst ferns, the grand foliage and yellow flower spikes of *Gardnerianum* is very imposing.

1636	Helleborus niger (the White Christmas Rose), in flower December and January. To have the snow-white blossoms of this beautiful flower for Christmas decoration, prepare a pit or frame by removing the natural soil, if unsuitable, and replace with a compost of loam and leaf soil; in this plant, and as the flower buds appear in December, put the lights on. Or the plants may be arranged in groups in the borders, and in December hand-lights placed over them, resting the same on bricks. For naturalization and wild gardens, this is a grand plant.	per doz. 5s. 6d., 7s. 6d., 10s. 6d., 15s., and 25s.; each gd., 1s., 1s. 6d., 2s. 6d., and 3 6
1637	Helleborus niger maximus (the Great Christmas Rose), figured in "The Garden," 1878, as <i>H. Aitifolius</i> . This grand species is as remarkable for its large dark green leaves as for its very large flowers, which are of a rose tint, unless made white by placing a hand-light over the plant when in bud. Figured in "The Garden," 1878	1s. 6d., 2s. 6d., & 3 6
1638	Helleborus niger minor, smaller in all its parts than the type; comes into flower earlier, and generally opens pure white	1s. 6d. & 2 6
1639	Helleborus orientalis and viridis (the Lenten Roses). We shall not give a list in our present issue, our stock not being at the moment large enough to meet the heavy demand of those who are completing collections. Those who are commencing cannot do better than order one of the collections for the present.	

		each—s. d.
1640	Helleborus orientalis (the Eastern Lenten Roses), 6 in 6 varieties,.....	10s. 6d., 15s., & 21 0
1641	" " 12 in 12 varieties	21s., 30s., & 42 0
1642	Helleborus orientalis punctatus, " flowers purple, beautifully spotted all over the surface. We hold a large stock of this, and offer it at greatly reduced prices. For pot culture or flower borders	per doz. 7s. 6d., 10s. 6d.; 15s.; 9d., 1s. &
1643	* Hemerocallis disticha, fl. pl., rich orange, shaded crimson, double flowers, 2 ft.	1 6
1644	" flava, sweet-scented yellow flowers, 1½ ft.	1 0
1645	" kwanso, fl. pl., variegated leaves, white and green, beautifully variegated, 3 ft.	0 6
1646	" Thunbergi, rich clear yellow, 1½ ft.	1 6
	The Hemerocallis is an exceedingly ornamental border plant; the rich yellow, sweet-scented flowers of Flava are much prized.	1 0
1647	* Hepatica, single blue	plants, per dozen, 5s. 6d. to 7s. 6d. 0 9
1648	" " double "	clumps, 1s. 6d., 2s. 6d., to 3 6
1649	" " double red	plants, 1s. 6d. to 2 6
1650	" " double red	plants, per dozen, 5s. 6d. to 0 9
1651	" " single red	clumps, 1s. 6d., 2s. 6d. to 3 6
1652	" " single red	plants, per dozen, 5s. 6d. to 0 9
1653	" " white	plants, per dozen, 7s. 6d. 0 9
1654	" Angulosa, rich blue, flowers very large	plants, 1s. 6d. to 2 6
	Established masses or clumps of Hepaticas are at once decorative, and are best for flowering in pots. Of these clumps we have single blue and double red, and we recommend them to purchasers in preference to plants, even for planting out of doors.	1 0
1655	Hesperantha graminea, white, ½ ft.	A genus with small Ixia-like flowers, which { 1 6
1656	" pilosa, rosy, ½ ft.	expand their sweet-smelling blossoms in { 1 6
1657	" pumila, white, ½ ft.	the evening; frame culture. 1 6
1658	Hessca spiralis, rosy white flowers, resembling Leucojum autumnale, flowers in winter, hardy, 1½ ft.	per doz. 12s. 1 6
1659	Hollyhocks, mixed, finest double	per doz. 9s. & 12s.; 1s. & 1 6
1660	Homeria collina, a beautiful Sparaxis-like plant, with a profusion of orange-scarlet flowers, cultural treatment same as for Ixias, 1½ ft.	per doz. 4s. 6d. 0 6
	Hyacinths, see p. 6.	
1661	Hyacinthus amethystinus, an elegant miniature alpine Hyacinth of the most beautiful amethyst blue; a charming pot plant, and exceedingly decorative in flower borders, quite hardy, ½ ft.	per 10s., 10s. 6d.; per doz. 2s. 0 3
1662	" albus, pure white, a charming variety	per doz., 10s. 6d. 1 0
1663	* Hyacinthus candidans (the Snow-white Summer-flowering Giant Hyacinth), it would be difficult to over-estimate the value of this noble hardy plant, which attains a height of 3 to 4, and even 5 feet; surmounting a stout stem is a grand spike of numerous pendant bell-shaped, snow-white flowers, in July and August. It is a splendid conservatory plant, and by potting the bulbs in succession to June it will flower under glass till November. If grown in pots, plunge in ashes, as recommended for the Hyacinths, page 7. If for out-door decoration, plant 6 to 9 inches deep, and it will remain uninjured during the severest winter. Figured in "The Garden," 1881.	per doz. 3s. bd., 5s. 6d., & 7s. 6d.; 4d., 6d. & 0 9
	and resembling a Giant Trumpet Narcissus, 1 ft.	7 6
1664	* Hymenocallis littoralis, a beautiful greenhouse plant, with pure white flowers 3 to 4 inches long,	1 0
1665	Hypoxis elegans, white, black centre, ¾ ft.	{ Large tri-colored starry flowers, on graceful { 1 0
1666	" stellata, yellow, spotted black, ¾ ft.	stems, a fine greenhouse plant. 1 0
1667	* Imatophyllum Aitonii (Clivia nobilis), orange and green, 2 ft.	5 6
1668	" mniatum, rich clusters of orange-crimson flowers, 2 ft.	5s. 6d., 7s. 6d. & 10 6
1669	" cyrtanthiflorum, orange, 2 ft.	0 6
	The Imatophyllum is a noble plant for the greenhouse or sitting-room window, producing annually large flower heads of delicate reddish-orange lily-shaped flowers, provided the plant is not allowed too much pot-room; when growing give abundantly of water.	
	Iris, see p. 18.	
1670	* Ismene amancae, the golden yellow Peruvian Daffodil, a rare species, 1½ ft.	10 6
1671	" calathina, the pearly, sweet-smelling White Sea Daffodil, 1½ ft.	1 0
1672	" undulata, beautifully fringed, large white flowers, 1½ ft.	0 6
	The Ismene is a beautiful greenhouse plant, and can be grown out doors planted close to a wall at a depth of 9 inches.	
1673	* Ivies for covering walls, or forming edgings, in many beautiful varieties, green or variegated, price, according to strength	per doz. 15s., 21s., & 30s.
	Ixia, see p. 22.	
1674	Ixiolirion tataricum, splendid purple flower, figured in "The Garden," July, 1880, 1½ ft.	1 6
1675	" Pallasi, light purple, 1½ ft.	2 6
1676	" montanum, purple, 1½ ft.	1 6
	The Ixiolirion is a new family from Asia Minor, all perfectly hardy, with exceedingly beautiful flowers. Plant late in Autumn, and lift when done flowering.	
	Jacobaea Lily, see Amaryllis formosissima, p. 28.	
1677	* Kollkeria argyrostigma, a stove plant, with peculiarly beautiful rich velvety dark green, purple tinged foliage, spotted white, and with numerous flower-spikes of small white spotted red flowers.....	per doz. 5s. 6d. 0 6
1678	Lachenalia contaminata, rose-coloured Heliotrope-scented flowers, ½ ft.	1 6
1679	" fragrans, white, sweet smelling flowers, 1 ft.	1 6
1680	" luteola, green, yellow, and red, 1 ft.	0 6
1681	" maculata, 1 ft.	0 6
1682	" Nelsoni, beautiful rich yellow, 1 ft.	3 6
1683	" luteola ex. auroa, 1 ft.	3 6
1684	" aurea ex. rossa, 1 ft.	3 6
1685	" aurea, golden yellow, ¾ ft.	3 6
1686	" psundula, red, tipped green and purple; most beautiful!, ¾ ft.	per doz., 7s. 6d. 0 9

		each- s. d.
1687	Lachenalia pustulata, white, very pretty and distinct, 1 ft.	1 6
1688	" quadricolor (true), crimson and yellow, very beautiful, 1 ft.	2 6
1689	" superba, yellow, tipped scarlet, 1 ft.	1 0
1690	" tigrina, white, 1 ft.	2 0
1691	" tricolor, scarlet, yellow and green, 1 ft.	0 6
1692	" viridis, green and white, 1 ft.	1 6
<p>We acquired the late Mr. Nelson's stock of Lachenalias, a class of plants with which his name is intimately associated, he having made it a special study for many years, and gathered together most of the species and varieties in cultivation; the happy crosses that Mr. Nelson made added considerably to the beauty and usefulness of this family. Those who know this interesting race of Winter and Spring flowering bulbous plants, are aware that <i>L. tuteola</i> is the one most generally cultivated, having a fine constitution, and being an admirable plant for hanging baskets; whilst <i>L. aurea</i> is remarkable for its rich deep yellow colour. By crossing these two species Mr. Nelson produced the exceedingly beautiful variety <i>L. Nelsoni</i>, for which the Florist Committee of the Royal Horticultural Society awarded a First Class Certificate, 1881. The Lachenalia should be potted early in a compost of loam, sweet leaf soil, and sand, placed in a greenhouse or frame, and not allowed to suffer for want of water; half hardy. See Plate in "The Garden," 1880.</p>		
1693	Lapageria alba, a magnificent white variety, producing in profusion bunches of flowers of great substance many mouths in succession, a very distinct and elegant greenhouse climber, which should have a place in every collection of plants. See Plate in "The Garden," 1878	10s. 6d., 15s., 21s., 42s. & 6s. 0
1694	" rosea superba, a vigorous growing variety, producing in bunches great profusion of large bell-shaped rosy crimson flowers, and blooming many months in succession	7s. 6d., 10s. 6d., 15s. to 21s. 0
<p><i>Leucojum</i>, see p. 16.</p>		
1695	*Libertia azurea, blue, 1½ ft.	1 6
1696	" formosa, white, 1½ ft.	1 0
1697	" pulchella, white, 1½ ft.	1 0
1698	" tricolor, white, 1 ft.	1 0
<p><i>Lilium</i> (Lilies), see p. 29.</p>		
<p><i>Lily of the Valley</i>, see p. 17.</p>		
1699	*Littonia modesta, an elegant greenhouse climber, producing in great abundance slender pale orange-coloured bell-shaped flowers	1 6
1700	*Lycoris aurea, golden pendant flowers, 1 ft.	7 6
1701	" radiata, rosy carmine flowers, 1½ ft.	7 6
1702	*Marica Californica, yellow, a very beautiful greenhouse bulb, 1½ ft.	1 0
1703	Massonia corymbosa, rose, ½ ft	1 0
1704	" latifolia, white, ½ ft.	1 0
1705	*Medeola Asparagooides (Similax), a lovely greenhouse climbing plant, and for hanging baskets; the slender small cordate dark green foliage of this plant is extensively used in America for eperges and table arrangements of all kinds. The Palermian ladies use sprays of this with Camellias for personal adornment, as it outlives in the heated atmosphere of the ball-room all other green foliage; a good pot full should always be in readiness to cut from	per doz., 6s.; 9d. & 1 0
1706	Melanthium junceum, pink, ½ ft.	1 0
1707	" purpureum, purple, ½ ft.	1 0
1708	" uniformum, white and yellow, ¾ ft.	1 0
1709	*Methonica Plantii, orange-yellow	3 6
1710	" superba, rich orange and yellow	5 6
1711	" virescens, yellow	3 6
<p><i>Methonica</i> (<i>Gloriosa</i>), these are charming stove climbing lilies of great beauty and interest. Once seen trained on a globe or along a wire the length of a long house, draped in their splendid blossoms, the impression is not readily effaced from the mind.</p>		
1712	*Michaelmas Daisies, 12 in 12 beautiful varieties	9s. & 12s.
1713	" 18 in 18 "	15s. & 18s.
1714	" 25 in 25 "	21s. & 25s.
1715	" 30 in 30 "	25s. & 30s.
<p>The Michaelmas Daisy, or Aster, represents a large family of highly decorative hardy herbaceous plants, of easy culture, and should occupy a place in every garden; for several months their beautiful star-shaped flowers are freely produced, and continue long in good condition. It is a desirable cut flower; some varieties are beautiful in lines and masses in pattern gardens, while all should occupy a place in every shrubbery and flower border; a well assorted collection will give a succession of flowers from May till late in November.</p>		
1716	*Michauxia campanuloides, rosy white, giant bell-flowered Campanula, once seen not soon forgotten, quite hardy, 3 ft.	1 0
1717	Milla uniflora conspicua, white, shaded porcelain, ½ ft.	per 100, 3s. 6d.; per doz., 6d. ...
1718	" lilacina, porcelain, striped violet, ½ ft.	per 100, 10s. 6d.; per doz., 2s. 0 3
1719	" Laxa, rich Tyrian purple, 1 ft.	" 5s. 6d. 0 6
1720	" Murrayana, fine lavender-blue, lined purple, 1 ft.	" 7s. 6d. 0 9
1721	" Hyacintha lactea, pure white, an exceedingly useful plant for cut flowers, 2 ft.	" 5s. 6d. 0 6
1722	" lilacina, flower heads, beautiful lilac, 2 ft.	3 6
<p>The <i>Milla</i> (<i>Tritelleia</i>) is a family of varied character; <i>Uniflora</i>, is very dwarf, and charming as an edging, and in beds or masses no prettier effect is produced in Spring than an admixture of these and <i>Anemone Apennina</i>; <i>M. Laxa</i> and <i>Murrayana</i> in June and July produce large numbers of the most lovely coloured flowers; <i>M. hyacintha lactea</i> is exceedingly decorative, and <i>M. lilacina</i> most beautiful; all perfectly hardy. See Plate in "The Garden," 1880.</p>		
1723	Modiola geranioides (<i>Matiscus geranioides</i>) (figured in "The Garden" of 28th Jan., 1882). This charming rock plant is profusely covered with intense magenta-purple flowers throughout the summer months. It is also valuable for rustic vases and hanging baskets, hardy, per doz. 10s. 6d. 1 0	
1724	*Montbretia Pottsi, beautiful crimson-scarlet, flowers resembling small Gladioli, and having a branched spike like the <i>Crocosmia aurca</i> , quite hardy, 2 ft. Figured in "The Garden," 1880 ...	1 6
1725	*Moraea edulis, bluish-white, ½ ft.	per doz. 4s. 6d. 0 6
1726	" iridioides, white, spotted yellow, ½ ft.	1 6

		each—s. d.
1727 *	<i>Moraea papilionacea</i> , pale blue, spotted dark blue, $\frac{1}{2}$ ft.	per doz. 4s. 6d. 0 6
1728 *	" tricuspid, greyish yellow and brown, $\frac{1}{2}$ ft.	1s. 6d. 0 3
	The <i>Moraeas</i> are all very elegant. At Glasnevin they have proved quite hardy, flowering throughout the summer in a peat border in front of one of the houses, and attaining the unusual height of about 3 ft.	
1729 *	<i>Morina longifolia</i> , very handsome herbaceous hardy plant, with long spiny leaves and beautiful rose-purple flowers, $2\frac{1}{2}$ ft.	1 6
	<i>Morphixia</i> , see p. 22. <i>Muscati</i> , see p. 17. <i>Narcissus</i> , see p. 9.	
1730 *	<i>Nerina corusca</i> , bright dazzling scarlet with 20 to 25 flowers in a cluster, 1 ft.	1 6
1731 *	" <i>crispa</i> , dark rose colour, curiously crisped and curled winter flower, $\frac{3}{4}$ ft.	0 6
1732 *	" <i>flexuosa</i> , distinct species, with rich pink flowers, 1 ft.	1 6
1733 *	" <i>Fothergillii</i> , a superb variety with deep vermilion-scarlet flowers, 1 ft.	2 6
1734 *	" <i>undulata</i> , rosy carmine, very beautiful, 1 ft.	1 6
	These are beautiful greenhouse flowers resembling the Guernsey Lily, but larger, except <i>Crispa</i> , which is a pretty miniature-flowered species. See Plate in "The Garden," 1881.	
1735 *	<i>Ophrys</i> and <i>Orchis</i> , 12 in 12 distinct beautiful hardy varieties for peat borders	15 0
1736 *	" 6 in 6	7 6
1737 *	<i>Opuntia Rafinesquiana</i> , a hardy yellow-flowered Cactus with edible fruits, planted on dry rockwork or in any hot, dry, sunny corner, abundance of flowers and fruit will be produced annually. See Plate in "The Garden," 1881.	
1738	<i>Ornithogalum arabicum</i> , white, black centre, handsome tufts of fragrant flowers in June, a plant of imposing aspect, $1\frac{1}{2}$ ft.	1 6
1739 "	<i>aureum</i> , yellow, purple centre, a very rare bulb, 1 ft.	per doz. 4s. 6d. 0 6
1740 "	<i>nutans</i> , green and white, 1 ft.	2 0
1741 "	<i>pyramidalis</i> , large beautiful white flower spike, 2 ft.	0 3
1742 "	<i>umbellatum</i> (Star of Bethlehem), white, quite hardy, 1 ft., per 100, 7s.; " 1s. 6d. 0 6	0 3
	The <i>Ornithogalums</i> are fine hardy border plants. <i>Arabicum</i> and <i>aureum</i> should either be grown in pots or planted close to a wall, at a depth of 9 inches.	
1743 *	<i>Oxalis</i> , a collection of fine named sorts, either for pot culture or to plant out of doors, per doz. 2s. 6d., each 4d.; mixed varieties, per doz. 1s. 6d.	
	This is a genus of elegant plants in flower and foliage, suitable, from their dwarf, tufted, spreading growth, for pot culture, rockwork, or flower beds. These beautiful plants succeed best on light soil, and with a covering of ferns or litter in winter.	
	<i>Paeoniae</i> , see p. 26.	
1744 *	<i>Pancratium calathinum</i> , fine white, for greenhouse, or to plant out under a wall, at the depth of a foot, 2 ft.	per doz. 5s. 6d. 0 9
1745 *	" <i>caribaeum</i> , very handsome white, warm house culture, $1\frac{1}{2}$ ft.	5 6
1746 *	" <i>hirsutum</i> , pure white, sweet-scented, warm-house culture, 2 ft.	7 6
1747 *	" <i>illyricum</i> , white flowers, delightfully fragrant, suitable for pot culture, or to plant under a south wall at a depth of a foot, $1\frac{1}{2}$ ft.	1 6
1748 *	" <i>maritimum</i> , very beautiful white flowers, with long filamentous outer segments. When coming into flower give abundance of water. Plant under a south wall at a depth of a foot, 2 ft.	1 0
	The <i>Pancratiums</i> are a race of noble plants with the most charming characteristic flowers.	
1749 *	<i>Pardanthus sinensis</i> (Leopard-spotted Flower), orange, spotted crimson flowers, hardy, 2 ft. per doz. 9s.	1 0
1750 *	<i>Pentlandia miniatia</i> , a beautiful greenhouse bulb, with handsome crimson drooping flowers, $1\frac{1}{2}$ ft.	1 6
1751 *	<i>Phædranassa chloracea</i> , yellow, tipped green, $1\frac{1}{2}$ ft.	0 6
1752 *	" <i>gloriosa</i> , yellow, very fragrant, $1\frac{1}{2}$ ft.	0 6
1753 *	" <i>rubro-viridis</i> , rich crimson, tipped green, flower about 2 inches long, $1\frac{1}{2}$ ft.	3 6
1754 *	" <i>ventricosa</i> , scarlet, with protruding anthers, $1\frac{1}{2}$ ft.	2 6
	The <i>Phædranassas</i> are handsome pot plants, but may also be grown under a south wall, planted at the depth of a foot.	
1755 *	<i>Pentstemons</i> , fine hardy varieties, 12 in 12 varieties, 9s. and 12s.	
1756 *	<i>Phloxes</i> , perennial, 50 in 50 beautiful varieties	42s., 5cs., & 62 0
1757 *	" 25 in 25 " "	21s., & 30 0
1758 *	" 12 in 12	9s., 12s., 15s., & 18 0
	The perennial or herbaceous <i>Phloxes</i> are grand border plants and all perfectly hardy; the flowers are beautifully formed and produced in large clusters in the greatest profusion, and vary from pure white to the richest purple and the most brilliant salmon and crimson. Some of the flowers are elegantly margined, others have a distinct centre or eye. A succession of flower is maintained from the same plants from June to October. When cultivated in pots treatment the same as for the <i>Chrysanthemum</i> .	
1759 *	<i>Phycella corusca</i> , orange-scarlet tubular flowers, of the most brilliant hue; greenhouse treatment, 1 ft. 3 6	
	<i>Plantain Lilies</i> , see p. 26.	
1760 *	<i>Platycodon grandiflorum</i> , the finest of the <i>Campanulas</i> , flowers very large, bell-shaped, and deep blue, quite hardy, $1\frac{1}{2}$ ft.	
1761 *	" <i>album</i> , beautiful large white bell-shaped flowers, quite hardy, $1\frac{1}{2}$ ft.	1 0
1762 *	<i>Plumbago Larrentia</i> , a fine autumn-flowering hardy perennial, with flowers in rosettes of a rich cobalt-blue, dwarf bushy habit, $\frac{1}{2}$ ft.	1 0
1763 *	<i>Podophyllum Emodi</i> , a fine hardy perennial, with large handsome leaves, which in spring are freely spotted black; the plant in due time produces immense berries of the most dazzling scarlet, 1 ft.	1 0
1764 *	<i>Polygonatum vulgare</i> (Solomon's Seal), a graceful hardy plant. Valuable to naturalize in wild gardens and woods, also a fine plant for early forcing, 2 ft.	3 6
1765 *	<i>Potentilla</i> , 20 in 20 varieties, double flower, 30s.	0 6
1766 *	" 12 in 12 12s. & 18s.	
	The Double <i>Potentillas</i> are most beautiful and so symmetrically formed, that when gathered they resemble small roses, with petals of a rich velvety texture; the plants are perfectly hardy and exceedingly ornamental.	
1767	<i>Puschkinia libanotica</i> , white, shaded blue, very early flowering, $\frac{3}{4}$ ft.	per doz. 10s. 6d. 1 0
1768	" <i>compacta</i> , white, shaded blue, very rare, $\frac{1}{2}$ ft.	21s. 2 6
	The <i>Puschkinias</i> is a first-class spring flowering bulb, taking rank with the <i>Chionodoxa</i> . <i>Libanotica</i> flowers first, with very profuse loose spikes, and is closely succeeded by <i>Libanotica compacta</i> , with its deeper-coloured and more compact spikes, perfectly hardy. Figured in "The Garden," 1878 & 1881. King Street, Covent Garden, 1882.]	

NEW DOUBLE-FLOWERED PYRETHRUMS.

These New Doubled-flowered Hardy Pyrethrums it is scarcely possible to over-estimate the value of as flowering plants in May and June. Their large Aster-like flowers range in colour from snow-white to the most intense magenta-crimson. The habit of the plant is graceful, the foliage elegant, and the flowers are produced in the greatest profusion, while its hardiness is beyond all doubt, having stood uninjured during the series of intensely severe winters of recent years. In herbaceous borders, in shrubberies, and situations where variety of colour is important, this plant is matchless. As a cut flower for vases and table decoration the blossoms are of great value, and are more lasting in water than any other flower. At the exhibitions in May and June these flowers have attracted much attention.

If after the first bloom is over the plants are cut back and attended to with manure water to encourage vigorous growth during the summer months, these beautiful Double-flowered Hardy Pyrethrums will again flower in Autumn almost as freely as they did in May and June.

1799	Lady Blanche, delicate blush	1828 Solfaterre, sulphur and white, 1/6	
1800	Le Dante, carmine-rose, golden centre	1829 Spectabile, magenta-rose	
1801	Madame Billiard, white, tinged with rose	1830 Virginale, white, orange centre	
And many others.			
1832	New Single Flowered Pyrethrums, in many varieties	9s., 12s., 15s., & 18s. per dozen.	
	Ranunculus, see p. 23.		
	Richardia, see Calla		
1833	Komulea rosea, rose, very beautiful, ½ ft.	per doz. 5s. 6d. 0 6	
1834	speciosa, carmine, very beautiful, ½ ft.	" 5s. 6d. 0 6	
	The Romuleas, or Trichonemas, are hardy graceful plants, with a very fine grassy foliage, from the midst of which rises a beautiful satiny flower. A fine pot plant.		
1835	*Roscoea purpurea, a very rare greenhouse bulb with purple flowers and grassy foliage, 1 ft.	5 o	
1836	*Roses, Dwarf varieties, Perpetuals, Tea, Mosses, &c.	per dozen, 12s., 15s., and 18 o	
1837	* " Standard "	per dozen, price on application.	
1838	* " Climbing varieties, assorted	per dozen, 12s., 15s., and 18 o	
1839	*Salvia patens, handsome rich deep blue flowers, 3 ft.	per dozen, 7s. 6d.	
1840	* " alba, beautiful pure white flowers, 3 ft.	10s. 6d. 1 o	
	The blue of the flowers of Salvia patens surpasses that of all other flowers; the value of the plant for mixed borders cannot be estimated, and as a bedding plant it is unique; lift in Winter.		
1841	*Sanguinaria canadensis major. The sweetly pretty starry white flowers in spring, which are borne above the Cottontail-like leaves of this plant, are truly charming; plant in moist peaty soils and shady places, perfectly hardy, ½ ft.	per dozen, 6s. 0 9	
1842	*Satyrium album, white, 1 ft.	1 6	
1843	* " carneum, flesh colour, 1 ft.	1 6	
1844	* " erectum, yellow, 1 ft.	1 6	
1845	*Saxifraga granulata plena, the beautiful pure white double flowers are produced early, in masses, and very effective, quite hardy, ½ ft.	per 100, 7s. 6d.; per dozen, 1s. 6d. 0 3	
1846	*Schyzostylis coccinea, beautiful rich scarlet flowers in spikes. Out of doors, sheltered amongst trees, in bloom at all seasons of the year, and at any time can be lifted and potted for the greenhouse, 1½ ft.	per dozen, 2s. 6d. 0 4	
	Scillas, see p. 16.		
1847	Sisyrinchium bermudianum, blue and white, 1 ft.	This fine family of hardy plants should be better known in our gardens than it is, they have elegant grassy foliage, and Iris-like growth with flowers in profusion, and Grandiflorum has large bell-shaped flowers with a graceful foliage.	1 0
1848	" convolutum, yellow, ½ ft.		1 0
1849	" grandiflorum, deep purple, 1 ft.		1 0
1850	" album, white, 1 ft.		1 0
1851	" odoratissimum, white, striped black, 1 ft.		2 6
1852	" refulcatum, straw colour, 1 ft.		1 0
1853	" sulphureum, yellow, 1 ft.		1 0

		each—s. d.
1854	* <i>Smilacina bifolia</i> , a miniature Lily of the Valley, with bright green leaves and numerous spikes of pure white flowers	per doz. 5s. 6d. 0 6
	Snowdrops, see p. 15.	
	Snowflakes, see p. 10.	
1855	<i>Sparaxis pulcherrima</i> , a remarkable plant, with a dense elegant grassy foliage, out of which rise graceful wiry flower stems 3 to 5 feet high, arching over at their extremity in a broad graceful curve, from which hang beautiful bell-shaped flowers; quite hardy. Figured in "The Garden," 1881	1s. 6d. & 2 6
	Spiraea, see p. 17.	
	Star of Bethlehem, see <i>Ornithogalum umbellatum</i> .	
1856	* <i>Thlaspianthus dubia</i> , a fine climber for covering arbours, bowers, etc., producing large yellow flowers in abundance	per doz. 7s. 6d. 0 9
1857	<i>Tigridia canariensis</i> , petals yellow, cup yellow, spotted scarlet, 1 ft.	" 3s. 6d. 0 4
1858	" <i>conchiflora</i> , petals yellow, cup yellow, spotted scarlet, 1 ft.	" 3s. 6d. 0 4
1859	" <i>grandiflora</i> , petals rich scarlet, cup spotted crimson or a yellow ground, flowers very large, American roots, ready in December, 1 ft.	per doz. 3s. 6d. 0 4
1860	" <i>pavonia</i> , petals scarlet, cup orange, spotted scarlet, 1 ft.	" 3s. 6d. 0 4
1861	" <i>spiccosa</i> , petals dark scarlet, cup orange, spotted scarlet, 1 ft.	" 3s. 6d. 0 4
	<i>Na</i> flower is more gorgeously coloured than the <i>Tigridia</i> (the Tiger Spotted Flower). The petals are self-coloured, while the petaloid stigmas and the cup of the flower are superbly tiger-spotted, so that the contrast between the lower and the upper part of the blossom is most remarkable. The flower of the <i>Tigridia</i> lasts only one day, but from the same scape comes a series of blossoms, each succeeding the other, and so maintaining the display for a long time; thus, from a group of plants flowers may be had from August to November. The roots may be planted in March, April, and May; for pot culture earlier.	
1862	* <i>Tradescantia</i> , a remarkably distinct handsome border plant, in flower Summer and Autumn; the flowers range from pure white to the richest purple, with reds and blues, 6 in 6 beautiful varieties, 4/6	1 0
	<i>Trichosma</i> , see <i>Romulea</i> .	
1863	* <i>Tricyrtis hirta grandiflora</i> , white, spotted black, and tinted rose, 2 ft.	0 6
1864	" " <i>nigra</i> , black, spotted white, 2 ft.	0 6
1865	" " <i>fol. variegatis</i> , leaves beautifully margined white, 2 ft.	0 6
1866	" " <i>macropodium</i> , yellow, spotted black, 2 ft.	0 6
	<i>Tricyrtis</i> , a family of New Japanese plants, remarkable for the beauty and singularity of their flowers; in every flower border these plants should have a place, and in every greenhouse they should be grown for winter flowering; perfectly hardy.	
1867	<i>Trillium atropurpureum</i> , deep purple.....	2 6
1868	" " <i>grandiflorum</i> (the Wood Lily), purest white	per doz. 21s. 2 0
	<i>Trillium</i> (the Wood Lily) is a valuable plant in moist peat beds and shady places, also a grand plant, to grow several together in a pan, and force early into flower.	
	<i>Tritelia</i> , see <i>Milla</i> .	
1869	<i>Tritoma glaucescens</i> , the rich orange-scarlet flowers, on stems 3 to 5 feet high, come in August, September, and October	per doz. 10s. 6d.; 1s. & 1 6
1870	" <i>grandis</i> , the bright orange-scarlet flowers, on stems 3 to 5 feet high, come in October, November, and December.....	per doz. 15s.; 1s. 6d. & 2 6
1871	" <i>Macowanii</i> , a very distinct dwarf species with orange flowers, 2 ft. Figured in "The Garden," 1877	The
1872	" <i>caulescens</i> , a noble species, very rare	3s. 6d. & 5 6
	The noble aspect of the <i>Tritomas</i> (<i>Kniphofia</i>) is quite unlike all other border plants; from the midst of a dense root foliage rise stout stems surmounted with thousands of small fiery-red flowers; a grand plant for shrubberies and wild gardens. <i>Tritomas</i> , see p. 23	
1873	<i>Tropaeolum azureum</i> (rare), an extremely beautiful species, with rich blue flowers	7 6
1874	" <i>brachyceras</i> , a fine yellow-flowered species	2 6
1875	" <i>Jarrati</i> , scarlet, orange, and black	1 6
1878	" <i>pentaphyllum</i> , red and green, perfectly hardy.....	1 6
1877	" <i>polyphyllum</i> , golden-yellow flowers in long trusses, quite hardy	9d. 1s. & 1 6
1878	" <i>speciosum</i> , rich scarlet flowers in clusters, quite hardy... in established pots, 2s. 6d. &	3 6
1879	" <i>tricolor</i> , scarlet, orange, and black	1 6
1880	" <i>tuberosum</i> , yellow and red, with green facing, very distinct and fine; hardy	per doz. 7s. 6d. 0 9
	<i>The Tropaeolum</i> occupies a wide range, and possesses great diversity of character and adaptation. <i>Azorensis</i> , <i>Brachyceras</i> , <i>Jarrati</i> , <i>Pentaphyllum</i> , <i>Speciosum</i> , and <i>Tricolor</i> are remarkable for a slender graceful growth, well adapted for covering wire globes, trellises, etc.; <i>Pentaphyllum</i> is hardy, planted close to a south wall. <i>Speciosum</i> is well known to tourists to the North of Scotland for its brilliant scarlet flowers, and wild graceful luxuriant growth; it is also met with in Wales and the North of England, festooning arches, and covering walls, fences, etc. In the Midland and Southern Counties plant in an eastern aspect, with moderately moist soil and atmosphere. <i>Polyphyllum</i> delights in a sunny aspect, and looks best growing close to a wall or naturalized in wild gardens, where its long racemes of bright golden flowers nestling in the midst of rich abundant glaucous foliage is charming; quite hardy. <i>Tuberosum</i> is very effective planted close to the bottom of a south wall, and is quite hardy.	
1881	<i>Tuberosa</i> , Doubts American, flowers pure white and perfectly double.....	per doz. 5s. 6d. 0 6
1882	" " extra strong selected roots.....	" 7s. 6d. 0 9
1883	" " " " " " This Pearl"; this variety is greatly prized, being more dwarf than the preceding; flowers pure white and perfectly double...per doz. 9s. 1 0	
1884	" " African grown roots, these are ready to plant from September; the American roots are not matured and ready for use till the close of the year	per doz. 7s. 6d. 0 9
1885	" " extra strong, selected roots	10s. 6d. 1 0
	<i>The flowers of the Tuberose</i> (<i>Polianthes tuberosa</i>) resemble the much-prized blossoms of the <i>Stephanotis</i> , but are more fragrant, and being perfectly double, are more generally useful. Plant the American roots in succession, from January till July, for a supply of cut flowers from May to December, and for conservatory decoration, where the delicious fragrance is much prized. Plant the African roots Sept., Oct., Nov.	

CULTURAL TREATMENT FOR FORCED FLOWERS.—The growers for Covent Garden pot the Tuberose single in 5 or 6-inch pots, and plunge in moist bottom heat, withholding water till the foliage appears, then giving it freely, growing on in a house with a high temperature, and a moist atmosphere till the flower buds develop; at this stage, if the plants are for the conservatory or sitting-room, they are removed to a greenhouse temperature. The bulbs for early flowering should be potted as soon as they can be procured, and kept in a warm temperature, never below 60 degrees. The reserve bulbs for succession may be potted at once, and allowed to make root growth, or they may be kept dry in a temperature never below 50 degrees.

CULTURAL TREATMENT FOR AUTUMN FLOWERS.—Anyone can grow the Tuberose and flower it successfully, and so enjoy the fragrance and beauty of this much-prized plant. In March or April pot singly in 5 or 6 inch pots, and under the stage of a greenhouse or in a frame, plunge in ashes or cocoa fibre, and cover with 6 inches of the same material. As the plants spear through the covering remove them and plunge out of doors under a south wall, giving a little protection at night, and plenty of water; when the flower buds are formed remove to the greenhouse, sitting-room window, or hall. In June a portion of the plants which were potted in March or April should be planted in the flower borders. From the middle of April to the middle of May dry roots may be planted in the open ground in a warm, sheltered part of the garden, and in October those which have not flowered, lift, pot, and enjoy the flowers indoors.

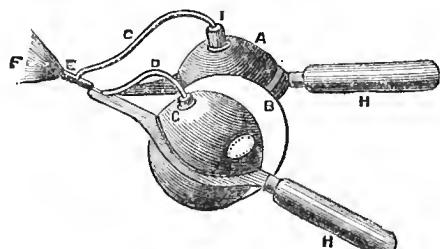

Tulips, see p. 13.

[Barr and Son,

MISCELLANEOUS HARDY PLANTS, ETC.

	each—s. d.
Acer Negundo variegatum , a distinct and handsome hardy deciduous tree, with large pinnate green and white leaves, which are very effective. Very desirable for shrubberies and ornamental plantations,	
Dwarfs, 1s. 6d. & 2s. 6d.; Standards, 2s. 6d. &	3 6
Acer polymorphum palmatum atropurpureum , an elegant hardy shrub, with palmate bronzy red leaves, having broad lance-shaped serrated segments; very desirable for shrubberies, and for training against walls or fences	3s. 6d. & 5 6
Aconitum Lycocotonum , a very distinct and effective hardy species, with bold deeply laciniated palmate leaves, and freely branched spikes, of bright sulphur-yellow flowers, which are borne in great profusion, during July and August; very desirable for lines, masses, or clumps, in mixed borders	
per doz., 10s. 6d.	1 0
Agrostemma coronaria atrosanguinea , a distinct beautiful variety of <i>Rose Campion</i> , with large rich velvety purple-crimson flowers, which commence opening in June, and continue in great profusion for many weeks in succession, height 2½ ft.	per doz., 7s. 6d. 1 0
Ampelopsis Veitchii (tricuspidata) , a beautiful slender growing small leaved Virginian creeper, of rapid growth, producing in great profusion dark shining green leaves tinged purple, which change to bright red in autumn; desirable for covering walls or old buildings, as it attaches itself to them without nailing or other assistance	1s. 6d. & 2 6
New large-flowered Anemone coronaria , "The Bride." This is the only snow-white single Poppy Anemone, and it would be difficult to over-estimate its value as a cut flower, or its decorative effect in beds and borders	per 100, 15s.; per doz., 2s. 6d. 0 3
Anemone fulgens Græcum , a very effective, beautiful hardy species, with large regularly formed, dazzling vermilion-scarlet flowers, with very dark centres on strong stalks, averaging 9 in. in height, which spring from masses of neat foliage; if planted at intervals, abundance of flowers may be had in the open air from the commencement of March to the end of June.....	per 100, 30s.; per doz., 4s. 6d. 0 6
Anemone japonica alba (<i>Honorine Jobert</i>), distinct and beautiful, pure white flowers, golden yellow centre, 2½ in. in diameter, borne in great profusion from August to December, height 2½ ft	per doz., 7s. 6d. 1 0
Anemone Pulsatilla (<i>Pasque Flower</i>), one of the most effective spring-flowering hardy herbaceous plants, producing in great profusion during the months of April and May, large purple flowers with conspicuous golden-yellow centres, foliage very neat and elegantly divided.....	per doz. 10s. 6d. 1 0
Anterleum Lillastrum major , a noble variety, with long elegant grass-like leaves, and strong stately flower stems, which attain the height of 2 to 3 ft., on which are borne, in great profusion, large pure white Lily-like flowers, which are very fragrant; quite hardy	1s. 6d. & 2 6
Aponogeton distachyon , a very distinct and beautiful hardy aquatic, with lanceolate leaves, and curiously twin-forked racemes of flowers, which are pure white, with conspicuous brown anthers; the flowers are very fragrant, and may be had in profusion every month of the year	1s. 6d. & 2 6
Atragene austriaca alba (<i>Clematis alpina alba</i>), a very distinct pretty foliaged climber of rapid growth, producing in profusion during May and June, large pure white flowers with greenish white Ane none-like centres; effective on walls, fences, and as a low trailing plant on bushes and rock-work.	2s. 6d. 1 0
Aubrieta purpurea grandiflora , a very beautiful variety, with large reddish purple flowers, which are produced in great profusion during March and April, growth vigorous and compact; very desirable for lines and masses, and for clumps on rockwork	per doz., 7s. 6d. 0 9
Azalea mol's , a very distinct beautiful tribe of hardy Azaleas, raised from seeds imported direct from Japan, growth vigorous, good habit, producing in great profusion large finely formed flowers in clusters of various shades of pink, primrose, red, yellow, white, &c. A most valuable modern addition to hardy shrubs, also a valuable plant for early forcing. 12 fine named varieties, from 30s. to 60s.; 2s. 6d. to 5 6	
Caltha palustris flore-pleno nana , a very effective variety with ample foliage, producing on strong stems during March and April, large and very double, bright golden-yellow flowers in clusters; a very decorative plant, which thrives on the margins of ponds and in moist situations.....	per doz. 10s. 6d. 1 0
Campanula carpatica , a dwarf neat-growing species, producing in great profusion, for many months in succession, large cup-shaped blue flowers, which are very effective in lines and beds. per doz. 5s. 6d. 0 9	
Campanula carpatica alba , a pure white variety of the preceding; a very desirable plant for lines and beds.....	per doz. 5s. 6d. 0 9
Campanula glomerata cerulea , a very distinct variety, during June and July producing in profusion on stems averaging 18 in. high, large tufts of dark glossy reddish violet-purple flowers, and clusters of similar flowers, from the axils of the upper leaves; very desirable for lines, clumps, or masses, in beds and borders	per doz. 10s. 6d. 1 0
Campanula turbinata pallida , a very distinct, neat-growing dwarf, and elegant variety, producing for weeks in succession, large cup-shaped delicate lavender-blue flowers; very desirable for lines or beds, and for masses in borders and on rock-work.....	per doz. 10s. 6d. 1 0
Catalpa syringaefolia aurea , a very effective plant, with large cordate-shaped golden-yellow leaves; very desirable for shrubberies, groups, or lines; a valuable addition to ornamental trees	2s. 6d. & 3 6
Chelone barbata antwerpensis , a beautiful hardy perennial with long spikes densely clothed with conspicuous coral-red flowers; commences flowering in June, and continues for many weeks, a valuable plant for summer and autumn decoration	per doz. 7s. 6d. 0 9
Chrysanthemum uliginosum (<i>Pyrethrum serotinum</i>). Large, pure white, flowers 3 inches in diameter, with conspicuous yellow centric, produced in large clusters profusely, during the months of September and October, height 4 to 5 feet; a very effective border plant	per doz. 7s. 6d. 0 9
Coreopsis lanceolata , brilliant golden yellow, flowers 2½ to 3 in. in diameter, with orange and brown centre, produced in great profusion from early in July to October, height 3½ ft., a fine hardy perennial.	per doz., 7s. 6d. 0 9
Crataegus oxyacantha occinea plena , the most beautiful variety of cultivated thorns; colour rich red, flowers very double, borne in great profusion even on very small plants; a suitable plant for early forcing, and also for the decoration of shrubberies and pleasure grounds.	Drawfs, 1s. 6d. to 2s. 6d.; Standards, 3s. 6d. & 5 6
Cydonia japonica cardinalis , a vigorous growing beautiful variety, producing in clusters and in great profusion very large, rich brilliant crimson-scarlet flowers during April and May; very effective grown as a bush or trained to a wall, fence, or pillar; quite hardy	3s. 6d. & 5 6
Doronicum austriacum , a fine species, habit neat and compact, flowers large, golden-yellow, averaging 3 in. in diameter, produced in great profusion during the months of March and April; very desirable border plant and effective in the conservatory	per doz., 7s. 6d. 0 9

	each—s. d.
Double White and Double Purple Rocket , a most beautiful herbaceous plant, similar to a fine double stock, very fragrant, and produced on large branching spikes, quite hardy	per doz., 10s. 6d. 1 0
Erigeron speciosus superbus , a vigorous compact-growing species, with erect freely-branched stems, which attain the height of 2½ feet, and bear in profusion during June and July, large bright shining purple-lilac Aster-like flowers, with conspicuous orange centres ; an effective plant for lines or mixed borders	per doz., 10s. 6d. 1 0
Gaillardia hybrida splendida , a vigorous growing variety, height 2 ft., producing in profusion for many months in succession noble Aster-like flowers, averaging 3 in. in diameter, with bold purplish brown centres, surrounded by a broad belt of bright red, slightly tinted purple, outer margins bright-golden-yellow, desirable border plant, quite hardy	1 6
Gentiana acaulis , a neat, compact, dwarf-growing plant, producing in great profusion for many months in succession, large dark blue flowers, very desirable for edgings, and clumps in mixed borders, quite hardy.....	per doz., 6s. 9d. & 12s.; each, 9d. and
Geranium armatum a vigorous compact-growing, very beautiful species, with handsome laciniated palmate leaves, and strong freely-branched flower stems, averaging 18 in. high, which yield in great profusion, during July and August, large rich deep purplish rose-coloured flowers, with conspicuous black centres ; very desirable border plants	per doz., 10s. 6d. 1 0
Harpallium rigidum , bright orange-yellow, with large conspicuous brown and orange centre, flowers 4 to 5 in. in diameter, freely produced from early in July to October, height 4 to 5 ft., a very effective plant in beds or borders	per doz., 7s. 6d. 0 9
Helianthus orgyalis , a very vigorous, growing, effective plant, with stout stems, amply clothed, with long, narrow, elegantly recurved lance-shaped leaves, flowers golden-yellow ; very effective as single specimens on lawns, in shrubberies, or mixed borders.....	per doz., 10s. 6d. 1 0
Hydrangea paniculata grandiflora , a very free-growing, hardy species, producing in great profusion large pyramidal panicles of large white flowers, 1 ft. in length and 2 in circumference; a most valuable plant for conservatory decoration	per doz., 15s. and 25s.; 1s. 6d. &
Lathyrus latifolius albus , an elegant variety of Everlasting Pea, which, during July and August, produces in profusion long dense spikes of pure white flowers, which are useful for bouquets ; a very effective climber, and desirable as single specimens in shrubberies or mixed borders	2 6
Lathyrus latifolius splendens , a beautiful variety of Everlasting Pea, which, during July and August, produces in profusion long dense spikes of rosy crimson flowers, tinted purple, which are useful for bouquets ; an effective climber, and desirable as single specimens in shrubberies, etc.	2 6
Lychnis Viscaria rubra flore-pleno , a most beautiful herbaceous plant, with brilliant rosy scarlet flowers, similar in appearance to those of a Double Stock ; in flower during June and July, habit neat and compact ; very effective as a pot plant, and in lines, masses, beds, and borders.....	per doz., 10s. 6d. 1 0
Malus floribundus , a very distinct, beautiful, neat-growing tree ; early in May its slender branches are profusely covered with large cherry-like blossoms, which are crimson outside and white within ; the buds, which are bright crimson, resemble bunches of small cherries ; it should have a place in every garden	Dwarfs, 1s. 6d. & 2s. 6d.; Standards, 3s. 6d. &
Muscari Szovitsianus , a very distinct and beautiful species of Grape Hyacinth, with ample foliage, and large densely clothed racemes of rich purplish blue flowers, borne on strong stems which vary from 6 to 12 on strong bulbs, and continue in perfection several weeks during March and April ; the most distinct and beautiful of the family.....	5 6
CEnothera Youngii , a very effective species, with stout, reddish, freely-branched flower stems, which attain the height of 2 to 2½ ft., and during June and July bear in profusion large golden-yellow flowers ; very effective in lines, clumps, or mixed borders	per doz., 7s. 6d. 0 9
Orchis foliosa , a very beautiful species, with broad, dark, shining green leaves ; the plants attain a height of 2 ft., and bear compact flower spikes averaging 9 in. in length, densely studded with beautiful lilac-purple flowers, spotted crimson ; in May and June a very desirable plant for open-air or conservatory decoration	2s. 6d. &
Potentilla hybrida Le Vesuve , a beautiful variety, large semi-double flowers, bright orange-scarlet, changing to crimson, and margined with golden-yellow, flowering profusely from early in June until late in August, height 2 ft., habit neat and compact ; very effective in lines, masses, beds, or mixed borders	3 6
Rubus fruticosus flore roseo-pleno , a very beautiful variety of Blackberry, which produces in great profusion for many weeks during Summer and Autumn, elegant sprays of very double neatly-formed rosy pink flowers, which are very effective as cut flowers ; it is well adapted for cultivating as a bush or pillar plant, training as a climber against fences or walls, and it may be allowed to scramble over rustic work, and in the wild garden	per doz., 15s. 1 6
Rudbeckia Neumannii , rich orange-yellow, with conspicuous velvety maroon centre, flowers 3 to 4 in. in diameter, in dense masses, and great profusion, from early in August to late in October, height 2½ ft., a very effective pot plant, and in lines or masses in beds or mixed borders, quite hardy per doz., 7s. 6d. 0 9	
Rudbeckia purpurea , a distinct species, which attains the height of 3 ft., and produces in profusion during the autumn months, large deep reddish purple flowers with large dark centres ; very desirable for flower borders and shrubberies, quite hardy	per doz., 10s. 6d. 1 0
Seneio pulcher , a very distinct species, attaining an average height of 2 ft., leaves oblong lanceolate, averaging 4 to 10 in. long, dark glaucous-green, very stout and leathery, flowers 2 to 3 in. in diameter, brilliant reddish purple with large golden-yellow discs, borne profusely on branched corymbs, during the autumn months ; a valuable hardy plant, and one of the most beautiful herbaceous plants in cultivation	per doz., 15s. & 25s.; each, 1s. 6d. & 2 6
Spiraea palmaria , a very distinct beautiful plant, with palmate leaves, and bright red flower stems, which attain a height of 2 ft., and are surmounted by numerous corymbs of handsome deep crimson flowers : a valuable hardy plant	per doz., 12s. 1 6
Spiraea venusta , a beautiful species, producing freely large corymbs of delicate pink flowers which continue long in perfection, a very effective plant	1s., 1s. 6d. & 2 6
Thalictrum adiantiforme , a beautiful plant, resembling a neat Maidenhair Fern ; the foliage is very useful for mixing with cut flowers, in vases, etc., a valuable and elegant hardy plant...per doz., 10s. 6d. 1 0	
Thalictrum minus , a distinct, neat-growing, pretty, hardy perennial, the leaves resemble the well-known Maidenhair Fern, and are very useful to mix with cut flowers	per doz., 7s. 6d. 0 9
Tritoma (Kniphofia) caulescens , a very distinct, noble species, with broad arching leaves, on stout branched stems, 3 to 4 ft. high, flowers bright red and yellow, produced in great profusion on stout stems 4 to 5 ft. high ; the plant, which is stately, has a more ornamental appearance than many of the well-known Dracænas and Yuccas	3s. 6d. & 5 6

HARDY ANNUALS FOR AUTUMN SOWING.

In England hardy Annuals should be universally sown in autumn for their rich, varied, and beautiful flowers in April and May. A period is thus occupied between the spring and summer flowers, and the beds and borders made gay with a race of plants as characteristic for variety of colour, profusion of bloom, and elegant habit of growth as can be met with in the whole range of Flora's domain, but due attention must be given to thinning out the plants, and this should be done so thoroughly, that each individual has space for development. So treated, these annuals form little bushes, densely covered with blossoms, altogether unlike the weedy plants of Annuals usually met with in flower borders, where fifty occupy a space sufficient only for one. We remember some thirty years ago seeing in a nursery border a plant of Virginia Stock, which had escaped the ruthless hoe in April; it was about a foot high, and a perfect conic shape. We took particular notice of this stray plant, and, considering the general opinion of the ephemeral flowering period of the Virginia Stock, we were surprised to find that it continued decorative for six weeks. The following seeds we recommend for immediate sowing, to flower in April and May. *The seed may be sown in a prepared bed, and transplanted in October:*

	per pkt.—s. d.	per pkt.—s. d.
Bartonia aurea, golden-yellow, 1½ ft. ... 3d. and o 6		Leptosiphon densiflorus albus, white, 1 ft. 3d. and o 6

Poppy, French, mixed, 1 ft. 3d. and o 6	Xeranthemum, mixed, 2 ft. 3d. and o 6	

SUNDRY FLOWER SEEDS WHICH MAY BE SOWN IN AUTUMN.

Primrose Polyanthus. The characteristic feature of this new valuable hardy plant is that early in Spring it has the solitary flowers of the primrose, and later on has large umbels or bunches of flowers like the Polyanthus; colours range from purest white to richest yellow, and from pink to darkest crimson. Mixed, all shades, per packet, 1s. and 2s. 6d.; whites, mixed, 1s. and 2s. 6d. per packet; yellows, mixed, 1s. and 2s. 6d. per packet; dark shades, mixed per packet, 1s. and 2s. 6d.		
Primula rosea, the most beautiful of the hardy Indian Primulas. per packet, 1s. and 2s. 6d.		

The Munstead Iceland Poppies. In these beautiful Summer flowers we have a remarkable instance of what may be accomplished in improving a race of plants, with a little care and attention. At Munstead it was noticed that these beautiful single hardy perennial Poppies were variable, and for some years past seeds were saved from the largest flowers of the most diverse shades, and in time every hue was secured, from pale lemon to orange and orange scarlet, many having great saucer-shaped flowers, 4 to 5 inches in diameter per packet, 1s. and 2s. 6d.		
--	--	--

Meconopsis Nepalense is, perhaps, the most ornamental of all hardy Poppies in flower and foliage; indeed, it may be questioned if there is amongst our hardy plants one having leaves so beautiful in winter, and with a flower spike so noble in summer. The radical leaves, which almost rest on the ground, are abundant, and have a remarkable golden, hairy surface, not unlike the Fire Thorn (<i>Solanum pyracanthum</i>); from amidst this rosette of leaves in summer there rises a pyramidal stout flower stem, 4 to 5 feet high, clothed with brownish green leaves, and covered with handsome sulphur coloured flowers. "Jack Towel's" gossiping article in <i>The Gardeners' Chronicle</i> , June 10th, page 767, on this remarkable plant, is deserving of a careful perusal, it is full of thought, and yet reads like a romance, per packet, 1s. and 2s. 6d.		
--	--	--

Meconopsis Wallichii (<i>The Blue Eastern Poppy</i>). To describe this grand plant would be to repeat the description of <i>M. Nepalense</i> , and again to call attention to "Jack Towel's" enthusiastic observations and reflections on a plant with novel characteristics and apparent eccentricities, surrounded with so much that is ornamental in the foliage and beautiful in the flowers, as to hold Jack entranced, while the plant for many months was undergoing an apparent inward conflict, whether it was right to disclose its Indian beauty to the eye of this Western connoisseur. Figured in <i>The Garden</i> rs. and 2s. 6d.		
--	--	--

Prince's Wonder of the West, Cineraria. A new distinct strain, remarkable for gigantic heads of bloom, individual flowers of large size, petals of good substance, and the richest possible texture... per packet 2s. 6d.		
---	--	--

Kelway's Model Cineraria, remarkable for a dwarf, compact growth, large flower heads per packet 2s. 6d.		
---	--	--

Barr's Covent Garden Primula, red, flowers large, of great substance per packet, 2s. 6d. and 3s. 6d.		
--	--	--

Barr's Covent Garden Primula, white, flowers large, of great substance per packet, 2s. 6d. and 3s. 6d.		
--	--	--

Auricula, from finest named varieties per packet 2s. 6d.		
--	--	--

Myosotis dissitiflora (<i>Forget-me-not</i>). Clear bright-blue, the earliest and most beautiful Forget-me-not, in flower from February. Established plants lifted in November, potted and placed under glass, can be had in flower from Christmas per packet, 1s. and 2s. 6d.		
--	--	--

Gentiana acaulis, the most intense and beautiful of blue flowers per packet 1s. and 2s. 6d.		
---	--	--

Pansy, saved from the finest-named varieties per packet 1s. and 2s. 6d.		
---	--	--

Viola, Lady in White. This is a charming variety, of fine, compact growth, and densely covered with pure pearly-white flowers, and almost always in flower per packet, 1s. and 2s. 6d.		
--	--	--

Viola, Queen of Bedders. A fine variety, with creamy-white flowers and violet-blue eye, per packet, 1s. and 2s. 6d.		
---	--	--

GARDEN REQUISITES.

BOUQUET STALK WIRE, In bundles of 1 lb., finest, 2s. 6d.; second, 2s.; third, 1s. 6d.; thickest, 1s. ·

BOUQUET STEEL WIRE, for wiring Camellias, Roses, Gardenias, &c., in bundles of 1 lb., 2s. 6d.

BOUQUET BINDING WIRE, per reel, 1s. 3d.; Silvered Binding Wire, per reel, 1s. 9d.

BOUQUET GUM, for fixing the petals of Geraniums, Primulas, &c., per bottle, 2s. 6d., and 3s. 6d.

BARR'S FLOWER AND FRUIT CONVEYANCE BOXES. These are made in various sizes, of strong tin japanned brown, the lower half divided into three compartments for fruit or early vegetables, and the upper half fitted with a tray for cut flowers, No. 1, 14, 10, 8, 22s. 6d.; No. 2, 18, 13, 10, 40s.; No. 3, 23, 16, 14, 50s. Lock and two keys.

BARR'S PORTABLE INDOOR FRAMES, heated with a paraffin lamp. These frames take the place of a stove or forcing house, and can be kept in a greenhouse, spare room, attic, or sitting-room window; and seeds of all kinds be raised, cuttings struck, and tender bulbous or tuberous rooted plants started into growth, such as Achimenes, Gloxinias, Begonias, Tuberoses, &c. Hyacinths wanted in flower early can be placed in these frames when they have been removed in doors. No. 1, 23 by 17 inches, on stand, 90s.; on dwarf feet, 84s.; No. 2, 29 by 20 inches, on stand, 98s.; on dwarf feet, 92s.; No. 3, 35 by 23 inches, on stand, 105s.; on dwarf feet, 98s.

BARR'S BEST GARDEN SYRINGES, No. 1, 21s.; No. 2, 15s.; No. 3, gentleman's size, 12s. 6d.; No. 4, light, for ladies, 10s. 6d.

BARR'S IMPROVED HYDROPUHL GARDEN ENGINE, No. 1, 50s., will throw a continuous stream of water 40 feet, and through a $\frac{3}{4}$ -inch suction hose draw a supply of water 60 feet; No. 2, 42s., for ladies, will, through a $\frac{1}{2}$ -inch hose, draw a supply of water 30 feet.

BASS MATS, best Archangel, per doz., 21s.; each 2s. 6d.

BASS RAPHIA, a light material for tying, per lb., 2s. 6d.; specimen bundles, 6d., and 1s.

BOOKS, "Burbridge on the Daffodil," with many coloured plates, and written in a charming style, 31s. 6d.

" " "The Garden Manual," 1s. 6d. | **BOOKS**, "Robinson's Hardy Flowers," 3s. 6d., by post, 4s.

" " "Robinson's Culture of the Mushroom," | " " "Robinson's Asparagus Culture," 1s., by post, 1s. 6d.

FUMIGATOR, "THE PAXTON," in deal case, 20s.

FLOWER GATHERER, "THE SELBY," exceedingly useful for ladies, 5s. 6d.

FRUIT AND FLOWER GATHERER, "THE SELBY," with long handle, 10s. 6d.

FRIGI DOMO.—Manufactured from hair and wool; a perfect non-conductor, maintaining a fixed temperature where applied, 2 yards wide, 3 yards wide, and 4 yards wide, 1s. 2d. per square yard.

GLOVES, strong for pruning, best quality, 2s. per pair. | **GLOVES**, Ladies, for pruning, 2s. per pair.

" " Gentlemen's, for pruning, 2s. 6d. | " " Ladies' Gauntlet, for pruning, 3s. per pair.

HYACINTH GLASSES, Tye's, plain, per dozen, 9s.; each, 1s.; Tye's ornamented, 2s. 6d., 3s. 6d., and 4s. 6d. each; various other styles of Hyacinth Glasses, ornamented, 2s. 6d., 3s. 6d., and 4s. 6d. each; miniature, Hyacinth Glasses, plain, per dozen, 5s. 6d.; each, 6d.; miniature ornamented, 1s. and 1s. 6d. each; supports, per dozen, 5s. 6d.; each, 6d.; miniature supports, per dozen, 3s. 6d.; each, 1s. 6d.

INSECT BRUSHES, "THE APHIS," each, 2s. 6d.

KNIVES, SAYNOR'S, best quality, pruning, 2s. 6d., 3s., 3s. 6d., 4s. and 4s. 6d. each.

" " " budding, 3s. and 3s. 6d. each.

LABELS, wooden, for pots and borders, painted; in bundles of 100, 3 $\frac{1}{2}$ inch, 8d.; 4 $\frac{1}{2}$ inches, 10d.; 5 $\frac{1}{2}$ inches, 1s.; 6 $\frac{1}{2}$ inches, 1s. 3d.; 7 $\frac{1}{2}$ inches, 1s. 6d.; 9 inches, 2s.

" " metallic, for pots and borders, per 100, No. 1, 4s.; No. 2, 3s. 6d.; No. 3, 4s.; No. 4, 3s. 6d.; No. 15, 2s. 6d.

" " for suspending: No. 5, for nailing to walls, 3s. 6d.; No. 13, 2s. 6d.; No. 6, for roses, 2s. 6d.; No. 14, 2s.; No. 7, for fruit trees, 2s. 6d. Ink to write on the metallic labels, per bottle, 6d. and 1s.

" " "**THE WILLESDEN INSOLUBLE METALLIC CARD LABELS.**" These new labels are a great boon to those who take an interest in the nomenclature of their plants. They may be written upon with any good ordinary ink, and the writing will remain clear and distinct to whatever exposure, temperature, or moisture they may be subjected. Sold in boxes of 100. Oval, for suspending: No. 1, 2 $\frac{3}{4}$ inches, 3s. 6d.; No. 2, 2 $\frac{1}{2}$ inches, 3s.; No. 3, 2 inches, 2s. 6d.; No. 4, 1 $\frac{1}{2}$ inches, 2s. Oblong, No. 5, 3 $\frac{1}{4}$ inch, 2s. 6d.; No. 6, 2 $\frac{1}{2}$ inches, 2s.; No. 7, wider, 1 $\frac{1}{2}$ inches, 2s. 6d.; No. 8, 1 $\frac{1}{2}$ inches, 2s. In bundles of 50: No. 1, 2s.; No. 2, 1s. 9d.; No. 3, 1s. 6d.; No. 4, 1s. 3d.; No. 5, 1s. 6d.; No. 6, 1s. 3d.; No. 7, 1s. 6d.; No. 8, 1s. 3d.

WATERPROOF TWINE to use with above, 100 ties, 1s.; thicker, 1s. 3d. 50 ties, 8d.; thicker, 9d.

MOWING MACHINES, £3 10s. and upwards, according to size.

NAILS, CAST IRON FOR WALLS, 4d. per lb.

" " "**EYELET FOR WALLS**, per box of a gross, 2s. 6d.

NETTING, BRITTAIN'S GARDEN, for shading and protecting fruit trees from frost, and the fruit from birds. No. 1, 10 yards long, 54 inches wide, 7s. 6d.

" " "**HAMPSON'S IMPERIAL NETTING**, resembling Brittain's, but lighter, excellent for shading and protecting fruit trees from frost, and the fruit from birds, 10 yards long, 54 inches wide, 7s. 6d.

" " "**TANNED** 1 inch mesh, about 2 yards wide, per yard run, 3d. About 4 yards wide, per yard run, 6d.

PENCILS, WOLFF'S, solid marking, for writing on wood, 3d.; extra thick, 6d.

POT COVERS, various, 6d. each and upwards.

SHREDS, WOOLLEN, best quality, per lb., 9d.

" " "**MEDICATED GARDEN SHREDS**, a substitute for woollen shreds for nailing up fruit trees and climbers; these medicated shreds are cut in convenient lengths, are durable, and possess the advantage of not harbouring insects; bundles of 100, 2 inch, 6d.; 3 inch, 8d.; 4 inch, 1s.; 5 inch, 1s. 6d.

SCISSORS, SAYNOR'S, best for Vines, 3s. 6d.

" " "**BREHAUTS'**, for pruning, 4s. 6d., 5s., and 6s.

TIFFANY.—A light, cheap, shading material for conservatories, greenhouses, etc.; No. 1, 20 yards long, 38 inches wide; per piece, 5s. 6d.; No. 2, manufactured with mineral solution, 6s. 6d. per piece; No. 3, double strength, 18 yards long by 36 in. wide, per piece, 7s. 6d.; No. 4, treble strength, per piece, 10s. 6d.

THERMOMETERS, in polished boxwood, best quality, each 2s. 6d. In iron, best quality, 3s. 6d.

VERBENA PEGS, GALVANIZED, per 1000, 5s. 6d.; 500, 3s.; 250, 1s. 9d.

WIRE, COPPER, used for suspending labels, per bundle, 1s., 1s. 6d., and 2s. 6d.

" " "**LEAD**, used for suspending labels, per bundle, 1s., 1s. 3d., and 1s. 6d.

WATERING CANS, for ladies, with brass rose, 4s. 6d., 5s. 6d., and 6s. 6d.

WILL'S PATENT SPRAY DIFFUSER, 1s.

WOODEN FLOWER STICKS, in bundles of 100, 12 inch, 1s. 3d.; 18 inch, 1s. 8d.; 24 inch, 2s. 6d.; 30 inch, 3s.; 36 inch, 3s. 6d.; 42 inch, 4s. 6d.; 48 inch, 6s.

Manures, Styptic, Grafting Wax, and Plant Insect Destroyers.

STANDEN'S GARDENERS' AND AMATEURS' MANURE. This is the best of all the concentrated fertilizers for hard wooded plants of all kinds, such as Camellias, Azaleas, Roses, Vines and other fruit trees in pots, and as a dressing for Vine and Peach borders; also valuable for all kinds of fruits, flowers, and vegetables out of doors. Sample canisters, 1/- and 2/6; large canisters, 5/6, 10/6, and 21/-.

PERUVIAN GUANO, Pure, OUT OF BOND. —5d. per lb.; or in canisters, 1/- and 2/6; per cwt., 25/-.

FLORVITA. For plants in pots, recommended as a safe and effective stimulating compound. Per bottle, 1/-.

THOMSON'S STYPTIC, for preventing the bleeding of Vines after pruning, &c. Per bottle, 3/-.

NEW FRENCH COLD GRAFTING WAX, in tin boxes, 1/-, 1/6 and 2/-, valuable for grafting and budding.

BARR & SON'S PREPARED CHARCOAL AND COCOA FIBRE, specially adapted for growing Ferns in Plant-Cases, and Bulbs in Jardinières, Glasses, &c. When the Prepared Cocoa Nut Fibre and Charcoal is used for glasses, before putting in the Bulbs the glasses should be filled with the preparation, and water given till it can absorb no more. On this place the Bulb, and fasten it down with brown paper as you would a jam pot, leaving an opening for the shoot. When the Bulb has sufficiently rooted into the preparation, untie the paper, and after this keep the material in the glass always wet. No. 1 quality, 6/- per bushel; 2/- per peck. No. 2 quality, 4/- per bushel; 1/- per peck.

COCOA FIBRE, 1/6 per bushel, 4 bush. for 5/-. **COCOA FIBRE,** finely sifted, 2/6 per bushel, 4 bush. for 7/6.

FRESH GREEN CARPET MOSS, in lots of 1/4, 1/6 and 2/6.

FOWLER'S INSECTICIDE. In jars at 1/6, 3/-, 5/6, and 10/-.

" **MEALY BUG DESTROYER,** per bottle, 1/-, 2/6, 5/-, and 10/-.

THE GISHURST COMPOUND, an effectual Insect-killer, boxes, 1/-, 3/-, and 10/-.

SUPERIOR TOBACCO PAPER, 1/6 per lb.; **SUPERIOR TOBACCO RAG,** 1/9 per lb.

TOBACCO POWDER. In canisters, 1/-, 2/6, and 5/- each. Powder Distributors, 2/6, 3/6, and 5/-.

KEMNSLEY AND HOWE'S INSECT DESTROYER. It is guaranteed by K. & H. to kill, at first trial, Mealy Bug, Scale, Thrip, Red Spider, American Blight, and all other Plant Insects, without the least injury to the foliage or flowers. Sold in Bottles, 1, 2/-, 3/6.

FIR TREE OIL, said to be the best and safest insect destroyer, half-pint, 1/6; pint, 2/6; quart, 4/6.

Watson's Weed Destroying Lawn Sand.

This Preparation (which was introduced to the public by the inventor in 1868) has the remarkable property of destroying Daisies, Ribbed Grass, Plantains, Dandelions, and other Weeds which have bulbous or tap roots: and at the same time of improving the Grass, by enriching the green and thickening the sward. An annual application of the Lawn Sand in Spring not only destroys the Scudding Weeds; but, by invigorating the grass, prevents, to some extent, the burning up during hot dry weather.

The "Lawn Sand" is clean, easy of application, and inodorous.

Your "Watson's Lawn Sand" has completely renovated and beautified two Lawns in this village. The North Lawn was one entire mass of Daisies, but now it presents a fine green grassy carpet. The South Lawn was much covered with Plantains as well as Daisies, and this has received the same treatment, carefully and judiciously applied. The Lawns may be viewed by any one.

Boston Spa, Yorkshire, December 16th, 1881.

VM. WHEELHOUSE.

Regarding your Lawn Sand; I used it on one Court of a Lawn Tennis Club, and it is now quite free from Weeds. The one I have done this season is larger, being 78 feet by 36 feet, and was a complete bed of Plantains, Daisies, and Dandelions. I applied the Lawn Sand in hot weather, but the Weeds being so thick on the Lawn, I had to give a second dressing. The effect of the Lawn Sand in improving the grass is marvellous. I find if too heavy a dressing is given, it makes the grass look unsightly till after a shower; then it becomes a fine dark green; and any one can see where the sand has been used. I am often asked what I have been doing to make the grass such a nice colour. The Lawn Sand, if used according to your directions, will kill all the weeds mentioned; but where plantains or dandelions stand singly, I would recommend a small handfulful of the Lawn Sand, being put on the centre of the plant. I consider it a great waste of time to cut with a knife plantains, &c., in the usual way, as it only weakens them for a time. I was talking with a brother gardener a short time ago, and he said he had been employing women for days weeding the lawn, whereas, had he used the Lawn Sand, a lad could have destroyed all these weeds in a short space of time. I shall in future use no other means for destroying such weeds on the Lawns.

Fetherston Rectory, Leatherhead, October, 1881.

J. GILBERT, Gardener.

Price 38s. per cwt. nett cash, including casks. 56 lb. kegs, 20s. 28 lb. tins, 10s. 6d. Sample Canisters, 2s. 6d. and 5s. 6d.

To have Dry and Warm Feet use GISHURSTINE as a Dubbing

On the Soles and Uppers of Boots and Shoes.

Gishurstine is sold in Tin Boxes, 6d. and 1s.; by post 9d. and 1s. 4d.

From the FLORIST AND POMOLOGIST, January 1881.—"The gardening world is indebted to the originator of Gishurst's Compound for a new substance, called Gishurstine, which is to be as beneficial to the health of gardeners as the former is destructive to their enemies."

From Mr. T. C. WRIGHT, Lincoln's Inn, 1st January, 1881.—"I am equally surprised and pleased to find that the boots I anointed liberally with Gishurstine are not only rendered by it perfectly waterproof and snowproof, but take as good a polish after they did before anointment."

From Miss FRANCES POWER CORBE, 4th February, 1881.—"To-day I travelled over swamps and morasses on Wisley Common for hours, and now I testify that, though my boots were already rather worn, and last week decidedly let in damp, I have returned this evening with my feet warm and dry as if I had never stepped but upon a wooden floor. 'Gishurstine' is admirable."

From a HUNTING MAN, 22nd January, 1881.—"I must send a line to say that I have found the Gishurst Dubbing [Gishurstine] first rate, having given it a good trial in this thick snow on a pair of fishing boots, which were as hard as a brick, and also on some new hunting boots, which used to punish me with their hardness; both are now as soft and comfortable as possible."

Directions for Use.—Warm the Boots, then rub in Gishurstine thoroughly all over upper Leathers, Welts, and Soles. This may be repeated once or twice a month, or oftener. One application makes leather soft and boots comfortable. Gishurstined boots take a good polish with blacking. Gishurstine has no unpleasant smell, and is otherwise an improvement on old-fashioned dubbing.

King Street, Covent Garden, 1882.]

EXTRACTS.

From the "Gardeners' Chronicle," July 8th, 1882.

"**Messrs. BARR & SON.**—The partnership subsisting between **Mr. Peter Barr** (the managing partner) and Miss Fanny Pryor, under the style and title of Barr & Sugden, having ceased, **Mr. Barr** has commenced business under the style and title of **Barr & Son**. The headquarters of the new firm being 34, King Street, Covent Garden."

From the "Garden," July 8th, 1882.

"We learn that the firm of Barr & Sugden no longer exists, and that **Mr. Barr** will in future carry on business at 34, King Street, Covent Garden, under the designation of **Barr & Son**. The ability with which **Mr. Barr** (as managing partner) developed the business of the late firm will now be transferred to the new one, and cannot fail to secure him an increased measure of success, being assisted by members of his family, who have been specially trained. We heartily wish him the prosperity he so well deserves."

From the "Gardeners' Magazine," July 8th, 1882.

"It was in the nature of an inauguration of the 'new departure' that **Messrs. Barr & Son** made an immense and beautiful display of hardy plants at South Kensington on Tuesday last. The collection comprised Lilliums, Ixias, Aquilegias, Campanulas, Funkias, Irises, Cænotheras, and subjects that are now in perfection in the open garden."

From the same paper we quote the following:—" **Messrs. Barr & Son**, King Street, Covent Garden, exhibited an immense and very attractive and interesting collection of plants and flowers of hardy herbaceous and bulbous plants. The collection sufficed to fill one-half of the large conservatory at South Kensington, and received much attention from all classes of visitors."

From the same paper, in report on the Royal Botanic Flower Show:—"A Silver Medal was awarded to **Messrs. Barr & Son**, King Street, Covent Garden, for a large and beautiful collection of hardy flowers."

From the "Journal of Horticulture," July 6th, 1882.

"One of the most extensive and varied collections of hardy flowers we have ever seen was staged, on the occasion of the Rose Show at South Kensington, by **Messrs. Barr & Son**. The group occupied a length of tabling of upwards of 100 feet, and consisted of fine masses of Lilliums, Irises, Paris Daisies, Chrysanthemum segetum, Rhodanthe, **[REDACTED]** laticula grandiflora, with a choice assortment of Delphiniums, Iberises, Ixias, **[REDACTED]**, Funkias, Cloves, Pinks; a new white variety of the latter named **[REDACTED]**, was particularly attractive. The collection was much admired."

From the same paper, in report on the Royal Botanic Flower Show:—" **Messrs. Barr & Son**, King Street, Covent Garden, had a similarly beautiful group in the corridor to that staged at Kensington on the previous day."

From the "Garden," July 8th, 1882.

In the report on the Royal Botanic Flower Show:—"The whole of one side of the long corridor was taken up by a very extensive display of cut flowers, exhibited by **Messrs. Barr & Son**, King Street, Covent Garden. It consisted of Lilies, Carnations, Marguerites, Early Gladioli, and various other flowers in quantity, while the group abounded with individual specimens of choice hardy plants; in short, the exhibit was a fine one, and one of the most extensive of hardy flowers that has been made in London for many seasons, and well merited the Silver Medal awarded."

From the "Gardeners' Magazine," July 15th, 1882.

"**Messrs. BARR & SON**, of King Street, Covent Garden, have secured the fine collections of Lachenalias and Narcissi possessed by the late Rev. John Nelson, of Aldborough, and in due course will issue a descriptive priced catalogue of them."

From the "Garden," July 15th, 1882.

"**LACHENALIAS AND DAFFODILS.**—The collections of these belonging to the late Mr. Nelson, of Aldborough, have passed into the hands of **Messrs. Barr & Son**, King Street, Covent Garden, who are prepared to distribute them."

From the "Gardeners' Chronicle," July 15th, 1882.

"**Messrs. BARR & SON.**—**LACHENALIAS AND DAFFODILS.**—The unique collections of Lachenalias and Daffodils possessed and cultivated by the late Rev. John Nelson, of Aldborough Rectory, have passed into the hands of **Messrs. Barr & Son**, for distribution. The collection of Lachenalias consists of sixteen species and varieties. The collection of Daffodils possesses special importance, inasmuch as Mr. Nelson carefully selected the finest types, and discarded those he considered as too closely resembling each other."
